Schwarz-Christoffel Mapping Tobin A. Driscoll, Lloyd N. Trefethen, 2002-06-20 This book provides a comprehensive look at the Schwarz Christoffel transformation including its history and foundations practical computation common and less common variations and many applications in fields such as electromagnetism fluid flow design and inverse problems and the solution of linear systems of equations It is an accessible resource for engineers scientists and applied mathematicians who seek more experience with theoretical or computational conformal mapping techniques The most important theoretical results are stated and proved but the emphasis throughout remains on concrete understanding and implementation There is a brief appendix illustrating the use of the Schwarz Christoffel Toolbox for MATLAB the state of the art package for computation of these maps

Complex Analysis THEODORE GAMELIN, 2003-07-17 An introduction to complex analysis for students with some knowledge of complex numbers from high school It contains sixteen chapters the first eleven of which are aimed at an upper division undergraduate audience The remaining five chapters are designed to complete the coverage of all background necessary for passing PhD qualifying exams in complex analysis Topics studied include Julia sets and the Mandelbrot set Dirichlet series and the prime number theorem and the uniformization theorem for Riemann surfaces with emphasis placed on the three geometries spherical euclidean and hyperbolic Throughout exercises range from the very simple to the challenging The book is based on lectures given by the author at several universities including UCLA Brown University La Plata Buenos Aires and the Universidad Autonoma de Valencia Spain

Schwarz-Christoffel Mapping in the 1980's Cornell University. Dept. of Computer Science, L. N. Trefethen, 1993 An informal survey is presented of the numerical computation of Schwarz Christoffel

maps i.e. conformal maps from a disk in the complex plane to a polygon and their applications in science and engineering It is shown that many superficially different problems of conformal mapping and potential theory can be reduced to Schwarz Christoffel maps and then solved by software such as the Fortran package SCPACK This report not for publication is a reproduction of a 1989 technical report from the Department of Mathematics at the Massachusetts Institute of Technology

Analytic Solutions for Flows Through Cascades Peter Jonathan Baddoo,2020-08-31 This thesis is concerned with flows through cascades i.e. periodic arrays of obstacles Such geometries are relevant to a range of physical scenarios chiefly the aerodynamics and aeroacoustics of turbomachinery flows Despite the fact that turbomachinery is of paramount importance to a number of industries many of the underlying mechanisms in cascade flows remain opaque In order to clarify the function of different physical parameters the author considers six separate problems For example he explores the significance of realistic blade geometries in predicting turbomachinery performance and the possibility that porous blades can achieve noise reductions In order to solve these challenging problems the author deploys and indeed develops techniques from across the spectrum of complex analysis the Wiener Hopf method Riemann Hilbert problems and the Schottky Klein prime function all feature prominently These sophisticated tools are then used to elucidate the underlying mathematical and physical structures present in cascade flows The ensuing solutions greatly extend previous works and offer new avenues for future research The results are not of simply academic value but are also useful for aircraft designers seeking to balance aeroacoustic and aerodynamic effects

Applied Mathematics, Modeling and Computer Simulation Chi-Hua Chen,2022-02-15 The pervasiveness of computers in every field of science industry and everyday life has meant that applied mathematics particularly in relation to modeling and simulation has become ever more important in recent years This book presents the proceedings of the 2021 International Conference on Applied Mathematics Modeling and Computer Simulation AMMCS 2021 hosted in Wuhan China and held as a virtual event from 13 to 14 November 2021 The aim of the conference is to foster the knowledge and understanding of recent advances across the broad fields of applied mathematics modeling and computer simulation and it provides an annual platform for scholars and researchers to communicate important recent developments in their areas of specialization to colleagues and other scientists in related disciplines This year more than 150 participants were able to exchange knowledge and discuss recent developments via the conference The book contains 115 peer reviewed papers selected from more than 250 submissions and ranging from the theoretical and conceptual to the strongly pragmatic and all addressing industrial best practice Topics covered include mathematical modeling and applications engineering applications and scientific computations and the simulation of intelligent systems Providing an overview of recent development and with a mix of practical experiences and enlightening ideas the book will be of interest to researchers and practitioners everywhere
