The Routledge Companion to Nineteenth Century Philosophy Dean Moyer, 2010-04-05 The nineteenth century is a period of stunning philosophical originality characterised by radical engagement with the emerging human sciences Often overshadowed by twentieth century philosophy which sought to reject some of its central tenets the philosophers of the nineteenth century have re emerged as profoundly important figures The Routledge Companion to

Nineteenth Century Philosophy is an outstanding survey and assessment of the century as a whole Divided into seven parts and including thirty chapters written by leading international scholars the Companion examines and assesses the central topics themes and philosophers of the nineteenth century presenting the first comprehensive picture of the period in a single volume German Idealism philosophy as political action including young Hegelians Marx and Tocqueville philosophy and subjectivity including Schopenhauer Kierkegaard and Nietzsche scientific naturalism including Darwinism philosophy of race experimental psychology and Neo Kantianism utilitarianism and British Idealism American Idealism and Pragmatism new directions in Mind and Logic including Brentano Frege and Husserl The Routledge Companion to Nineteenth Century Philosophy is essential reading for students of philosophy and for anyone interested in this period in related disciplines such as politics history literature and religion

Darwinian Creativity and Memetics Maria Kronfeldner,2014-09-11 Maria Kronfeldner examines how Darwinism has been used to explain novelty and change in culture through the Darwinian approach to creativity and the theory of memes The first claims that creativity is based on a Darwinian process of blind variation and selection while the latter claims that culture is based on and explained by units memes that are similar to genes Both theories try to describe and explain mind and culture by applying Darwinism by way of analogies Kronfeldner shows that the analogies involved in these theories lead to claims that give either wrong or at least no new descriptions or explanations of the phenomena at issue Whereas the two approaches are usually defended or criticized on the basis that they are dangerous for our vision of ourselves this book takes a different perspective it questions the acuteness of these approaches Darwinian theory is not like a dangerous wolf hunting for our self image Far from it in the case of the two analogical applications addressed in this book Darwinian theory is shown to behave more like a disoriented sheep in wolf s clothing

What the Philosophy of Biology Is M. Ruse,2012-12-06 Philosophers of science frequently bemoan or cheer the fact that today with the supposed collapse of logical empiricism there are now 10 grand systems However although this mayor may not be true and if true mayor may not be a cause for delight no one should conclude that the philosophy of science has ground to a halt its problems exhausted and its practioners dispirited In fact in this post Kuhnian age the subject has never been more alive as we work with enthusiasm on special topics historical and conceptual And no topic has grown and thrived quite like the philosophy of biology which now has many students in the field producing high quality articles and monographs The success of this subject is due above all to the work and influence of one man David Hull In his own writings and in the support he has given to others he has shown true leadership in the best Platonic sense It is now twenty years since Hull fnt gave his seminal paper What the philosophy of biology is not and to mark that point and to show our respect gratitude and affection to its author a number of us who owe much to Hull decided to produce a volume of essays on and around themes to which Hull has spoken

From a Biological Point of View Elliott Sober,1994-09-30 Elliott Sober is one of the leading philosophers of science and is a former winner of the Lakatos Prize the major award in the field This new

collection of essays will appeal to a readership that extends well beyond the frontiers of the philosophy of science Sober shows how ideas in evolutionary biology bear in significant ways on traditional problems in philosophy of mind and language epistemology and metaphysics Amongst the topics addressed are psychological egoism solipsism and the interpretation of belief and utterance empiricism Ockham's razor causality essentialism and scientific laws The collection will prove invaluable to a wide range of philosophers primarily those working in the philosophy of science the philosophy of mind and epistemology

History and Philosophy of the Life Sciences, 1979 **The Metaphysics of Evolution** David L. Hull, 1989-11-14 This critical collection of essays represents the best of the best when it comes to philosophy of biology Many chapters treat evolution as a biological phenomenon but the author is more generally concerned with science itself Present day science particularly current views on systematics and biological evolution are investigated The aspects of these sciences that are relevant to the general analysis of selection processes are presented and they also serve to exemplify the general characteristics exhibited by science since its inception

The Evolution of Agency and Other Essays Kim Sterelny, 2000-11-13 This book presents a collection of linked essays written by one of the leading philosophers of biology Kim Sterelny on the topic of biological evolution The first half of the book explores most of the main theoretical controversies about evolution and selection while the second half applies some of these ideas in considering cognitive evolution These essays some never before published form a coherent whole that defends not just an overall conception of evolution but also a distinctive take on cognitive evolution

The Evolution of Agency and Other Essays Kim Sterelny, 2001 This book presents a collection of linked essays written by one of the leading philosophers of biology Kim Sterelny on the topic of biological evolution The first half of the book explores most of the main theoretical controversies about evolution and selection Sterelny argues that genes are not the only replicators non genetic inheritance is also extremely important and is no mere epiphenomenon of gene selection The second half of the book applies some of these ideas in considering cognitive evolution Concentrating on the mental capacities of simpler animals rather than those of humans Sterelny argues for a general distinction between detection and representation and that the evolution of belief like that of representation can be decoupled from the evolution of preference These essays some never before published form a coherent whole that defends not just an overall conception of evolution but also a distinctive take on cognitive evolution
