Grading the Nation's Report Card National Research Council, Commission on Behavioral and Social Sciences and Education, Board on Testing and Assessment, Committee on the Evaluation of National and State Assessments of Educational Progress, 2000-04-23 The National Assessment of Educational Progress NAEP known as the nation's report card has chronicled students' academic achievement in America for over a quarter of a century. It has been a valued source of information about students' performance providing the best available trend data on the academic achievement of elementary, middle, and secondary school students in key subject areas. NAEP's prominence and the important need for stable and accurate measures of academic achievement call for evaluation of the program and an analysis of the extent to which its results are reasonable, valid, and informative to the public. This volume of papers considers the use and application of NAEP. It provides technical background to the recently published book *Grading the Nation's Report Card: Evaluating NAEP and Transforming the Assessment of Educational Progress* (NRC 1999) with papers on four key topics: NAEP's assessment development, content validity, design, and use; and more broadly, the design of education indicator systems. **Excerpts from**

Motivating Persistence in the Face of Failure Catherine Chi Chase, 2011 Failure often presents a valuable learning opportunity; however, students may need motivational scaffolds to protect them from the negative psychological ramifications of failure. This work explored the effectiveness of a motivation-based intervention called an ego protective buffer (EPB) that was designed to enhance persistence after failure. An ego protective buffer (EPB) maintains a stable sense of competence by lessening the impact of failure on one's psyche. The specific instantiation of an EPB tested here was designed to elicit a combination of internal and external attributions for failure. External attributions protect one's sense of competence by averting the blame for failure away from the self, while internal attributions encourage students to take some responsibility for remedying the failure situation. Based on this theory, we embedded an EPB into the rule structure of a computer-based genetics game and unleashed it on 143 seventh graders. In the EPB condition, students were told that winning in the game was a probabilistic outcome dependent on a combination of chance and skill on the part of the students. In the Control condition, students were told that winning in the game was a deterministic outcome dependent on students' skill only. Students played the game during two class periods. Measures include pre and posttests, motivational survey measures, and in-game behaviors. The EPB did have an effect on learning, but only amongst high-failing students. High-failing EPB students learned just as much as their low-failing counterparts. This was not so in the Control condition, where high-failing students learned far less than their low-failing counterparts. So the high-failing EPB group was behaving as if they were buffered from the effects of failure. We also found evidence of a possible mechanism behind this learning effect. In the high-failing EPB condition,

students were equally likely to persist after success and failure while in the Control condition students were far more likely to persist after success exhibiting risk averse behaviors This difference was more exaggerated in a within subjects comparison contrasting the same individuals in situations of high and low failure Finally persistence after failure was associated with learning across the full sample of subjects Regardless of condition or failure rate students who persisted more after failure also learned more This study together with the author s related body of work provides compelling evidence that an EPB is a viable intervention for encouraging persistence in the face of failure

Castle,1995 The literature on rural America to the extent that it exists has largely been written by urban based scholars perpetuating out of date notions and stereotypes or by those who see little difference between rural and agricultural concerns As a result the real rural America remains much misunderstood neglected or ignored by scholars and policymakers alike In response Emery Castle offers *The Changing American Countryside* a volume that will forever change how we look at this important subject Castle brings together the writings of eminent scholars from several disciplines and varying backgrounds to take a fresh and comprehensive look at the forgotten hinterlands These authors examine the role of non metropolitan people and places in the economic life of our nation and cover such diverse issues as poverty industry the environment education family social problems ethnicity race religion gender government public policy and regional diversity The authors are especially effective in demonstrating why rural America is so much more than just agriculture It is in fact highly diverse complex and interdependent with urban America and the international market place Most major rural problems they contend simply cannot be effectively addressed in isolation from their urban and international connections To do so is misguided and even hazardous when one fourth of our population and ninety seven per cent of our land area is rural Together these writings not only provide a new and more realistic view of rural life and public policy but also suggest how the field of rural studies can greatly enrich our understanding of national life **Report** Michigan State University.
