## Science Of The Senses:

**Brain Sense** Faith Hickman Brynie, 2009-09-28 Complex and crucially important the senses collect the massive amount of information we need to navigate daily life and serve as a filter between our inner selves and the larger world But the science of how the senses work has been little understood until now New research is rapidly uncovering fascinating insights into how the brain processes sensory information It s not simply a matter of the brain controlling the senses the senses actually stimulate brain development For example the brain s sound processing centers mature properly only when sound impulses trigger them to do so which is why cochlear implants are best used before the age of three Brain Sense reveals this and a wealth of findings on how the brain and senses interact as it examines each of the five major senses touch smell taste vision and hearing With eloquent writing and gripping stories the author deploys a rare gift for explaining complex scientific ideas in a way that is clear and comprehensible She introduces the scientists at the forefront of brain sense studies neurologists brain mappers bio chemists physicians cognitive psychologists and others as well as real life people who are contributing to the research and benefiting from its practical applications such as haptic devices to assist people who have lost limbs or rehabilitative software for those who have suffered impairments to their motion vision You ll find new research that explains Why placebos work by changing the way the brain processes pain How humans respond to pheromones in the same manner as other animals How taste is highly influenced by expectations of taste Why color significantly aids the ability to remember an object How the capacity for language is already at work in newborn babies What happens in the brain to produce sensory experiences such as d j vu and phantom limb pain And much more Expansive and enlightening Brain Sense shows us that the brain is both flexible and variable and the reality that we construct based on inputs gathered from the senses differs from person to person It sheds a much needed light on the elusive workings of the extraordinary human brain

**Signals and perception** Open University. SD329 Course Team, 2003 This block is split into three sections Touch and Pain Smell and Taste and Integrating the Senses Touch and Pain This section describes the somatic sensory system This includes at least four senses touch pain temperature and proprioception the sense of position and movement It looks at both the body s own mechanism of pain control and the use of drugs for pain relief Smell and Taste These two senses are closely interlinked and both involve the interaction of molecules rather than energy as is the case with the other senses For that reason they are often referred to as the chemical senses Topics covered in this section include the molecular characteristics of substances that we smell or taste the coding of smell and taste the nature of the receptors involved the mechanism of transduction and the role of human pheromones in sexual attraction Integrating the Senses This section brings the various senses together to examine how they interrelate and how signals affecting one sense can conflict with those stimulating another sense This can sometimes be simply uncomfortable e g a feeling of nausea or potentially dangerous e g if it happens to aircraft pilots The block looks at how perception can be manipulated in virtual reality and hypnosis Super Senses
