is the way and not ways This is about the learning of our consciousness in its movement as it is which basically is movement of feelings and sensations That is the learning of life per se is possible only in the fire of observation of feelings and sensations with skill and diligence involving the awakening of bodhi or intelligence on its own from nowhere and their emptying We need to understand this absolutely clearly Look you drive a car by learning driving skills how a car works traffic rules etc however when you drive a car if you miss attention for a second you will have an accident Attention cannot be learned and achieved by any gradual preparation learning some methodology or science Thought has no role in learning about and coming to attention Attention can use thought and its skills in different fields but not vice versa Round the other way inwardly thought has no potential to behold the movement of feelings as they are and the tremendous speed of sensational waves and learning life beyond the known Understand this well and realize the futility of different ways traditions beliefs in the name of religion The sense of siddhas and buddhas is the way of attention or meditation and virtue which is not such a difficult thing to understand and to live with Our ears listen and eyes see and it is not that somebody else's eyes listen ears see That is the part of religion In attention in right meditation with skill and diligence you are open to learning the infinite depths and mysteries of life And this text is a rare guide that shows what easy sweet and natural way or flowering of meditation is The water of the word is ambrosia not yet drunk learn about pain and sorrows in the blood Nath says this wisdom is peerless look behold don't fall in the pit Gorakh Sabadi 303

Neurotheology Andrew Newberg, Mary Clare Smith, 2024-07-02 The topic of neurotheology has garnered increasing attention in the academic religious scientific and popular worlds It is the field of study that explores the intersection between the brain and religious and spiritual phenomena However there have been no extensive attempts at exploring specifically how Catholic religious thought and experience may intersect with neurotheology The purpose of Catholic Neurotheology is to fully engage this groundbreaking area Topics are related to a neurotheological approach to the foundational Catholic beliefs derived from Scripture and Tradition an exploration of the various elements of Catholicism and of Catholic rituals and practices and a review of Catholic spiritualities and mysticism Specific Catholic scholars are considered in terms of the relationships among their ideas teachings and different brain processes Catholic Neurotheology engages these topics in an easy to read style and incorporates scientific religious philosophical and theological aspects of the emerging field of neurotheology By reviewing the concepts in a stepwise simple yet thorough discussion readers regardless of their background will be able to understand the complexities and breadth of neurotheology from a Catholic perspective More broadly issues include a review of the neurosciences and neuroscientific techniques religious and spiritual experiences

theological development and analysis liturgy and ritual philosophy epistemology and ethics and social implications all from a Catholic perspective *Relational Mindfulness* Roberto Aristegui, Javier Garcia Campayo, Patricio Barriga, 2021-03-25 This book proposes a new approach to mindfulness based interventions presenting them not as individual but as relational practices In the last decades mindfulness has exerted a growing influence on many fields of research and activity but always as an individual practice The authors in this volume believe that the strong development of mindfulness today implies considering a dialogue between this individualistic approach and the perspective of relational mindfulness based on social constructionism The volume is organized in two parts The first part focuses on the theoretical foundations of relational mindfulness The second part presents possibilities of applications of relational mindfulness in clinical and organizational settings to promote mental health and personal development *Relational Mindfulness Fundamentals and Applications* will be of interest to a wide range of professionals interested in applying mindfulness based interventions in mental health care and productive organizations such as clinical and health psychologists public health professionals and human resources analysts and consultants among others It is true that the metaphor of mindfulness has been enormously fruitful in its invitation to innovate By removing meditative practices from their ancient roots practitioners were free to create practices especially relevant to context At the same time there was also a recognizable loss in the profoundly rich heritage that was left behind For many of us the greatest loss resulted from the absorption of such practices into Western individualism What had once been an orientation to practice emphasizing our fundamental inter being had become a gateway to silent separation It is in this context that the present volume bursts into significance With special appreciation to the editors of this book we are treated to a multi dimensional exploration into the relational dimensions of mindfulness practices Bringing ideas experience and wisdom from across professions and across continents the contributors open an exciting path to the future Excerpt from the Foreword by Kenneth J Gergen **History of the Conflict Between Religion and Science** John William Draper, 1875
