Probabilistic Analysis Of The Sacco And Vanzetti Evidence:

A Probabilistic Analysis of the Sacco and Vanzetti Evidence Joseph B. Kadane, David A. Schum, 1996-05-25 A Probabilistic Analysis of the Sacco and Vanzetti Evidence is a Bayesian analysis of the trial and post trial evidence in the Sacco and Vanzetti case based on subjectively determined probabilities and assumed relationships among evidential events. It applies the ideas of charting evidence and probabilistic assessment to this case which is perhaps the ranking cause celebre in all of American legal history. Modern computation methods applied to inference networks are used to show how the inferential force of evidence in a complicated case can be graded. The authors employ probabilistic assessment to obtain opinions about how influential each group of evidential items is in reaching a conclusion about the defendants' innocence or guilt. A Probabilistic Analysis of the Sacco and Vanzetti Evidence holds particular interest for statisticians and probabilists in academia and legal consulting as well as for the legal community, historians and behavioral scientists. It combines structural and probabilistic ideas in the analysis of masses of evidence from every recognized logical species of evidence. Twenty-eight charts show the chains of reasoning in defense of the relevance of evidentiary matters and a listing of trial witnesses who provided the evidence. References include nearly 300 items drawn from the fields of probability theory, history, law, artificial intelligence, psychology, literature and other areas.

Methods for Statistical Data Analysis of Multivariate Observations R. Gnanadesikan, 1997-02-04 A practical guide for multivariate statistical techniques now updated and revised. In recent years innovations in computer technology and statistical methodologies have dramatically altered the landscape of multivariate data analysis. This new edition of *Methods for Statistical Data Analysis of Multivariate Observations* explores current multivariate concepts and techniques while retaining the same practical focus of its predecessor. It integrates methods and data-based interpretations relevant to multivariate analysis in a way that addresses real-world problems arising in many areas of interest. Greatly revised and updated, this Second Edition provides helpful examples, graphical orientation, numerous illustrations, and an appendix detailing statistical software including the S or Splus and SAS systems. It also offers an expanded chapter on cluster analysis that covers advances in pattern recognition. New sections on inputs to clustering algorithms and aids for interpreting the results of cluster analysis. An exploration of some new techniques of summarization and exposure. New graphical methods for assessing the separations among the eigenvalues of a correlation matrix and for comparing sets of eigenvectors. Knowledge gained from advances in robust estimation and distributional models that are slightly broader than the multivariate normal. This Second Edition is invaluable for graduate students, applied statisticians, engineers, and scientists wishing to use multivariate techniques in a variety of disciplines.

The Dynamics of Judicial Proof Marilyn MacCrimmon, Peter Tillers, 2012-12-06 Fact-finding in judicial proceedings is a dynamic process. This collection of papers considers whether computational methods or other formal logical methods developed in disciplines such as artificial intelligence, decision theory, and probability theory can facilitate the study and management of dynamic evidentiary

and inferential processes in litigation The papers gathered here have several epicenters including i the dynamics of judicial proof ii the relationship between artificial intelligence or formal analysis and common sense iii the logic of factual inference including a the relationship between causality and inference and b the relationship between language and factual inference iv the logic of discovery including the role of abduction and serendipity in the process of investigation and proof of factual matters and v the relationship between decision and inference
