Probabilistic Metric Spaces B. Schweizer, A. Sklar, 2011-10-14 This distinctly nonclassical treatment focuses on developing aspects that differ from the theory of ordinary metric spaces working directly with probability distribution functions rather than random variables The two part treatment begins with an overview that discusses the theory s historical evolution followed by a development of related mathematical machinery The presentation defines all needed concepts states all necessary results and provides relevant proofs The second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces Throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known metric space results to a more general setting **On Nonsymmetric Topological and Probabilistic Structures** Yeol Je Cho, Mariusz Grabiec, Viorel Radu, 2006 In this book generally speaking some properties of bitopological spaces generated by certain non symmetric functions are studied These functions called probabilistic quasi pseudo metrics and fuzzy quasi pseudo metrics are generalisations of classical quasi pseudo metrics For the sake of completeness as well as for convenience and easy comparison most of the introductory paragraphs are mainly devoted to fundamental notions and results from the classical deterministic or symmetric theory

Fixed Point Theory in Probabilistic Metric Spaces Olga Hadžić,1995 **Fixed Point Theory in Probabilistic** Metric Spaces O. Hadzic, Endre Pap, 2001-11-30 Fixed point theory in probabilistic metric spaces can be considered as a part of Probabilistic Analysis which is a very dynamic area of mathematical research A primary aim of this monograph is to stimulate interest among scientists and students in this fascinating field. The text is self-contained for a reader with a modest knowledge of the metric fixed point theory Several themes run through this book The first is the theory of triangular norms t norms which is closely related to fixed point theory in probabilistic metric spaces Its recent development has had a strong influence upon the fixed point theory in probabilistic metric spaces In Chapter 1 some basic properties of t norms are presented and several special classes of t norms are investigated Chapter 2 is an overview of some basic definitions and examples from the theory of probabilistic metric spaces Chapters 3 4 and 5 deal with some single valued and multi valued probabilistic versions of the Banach contraction principle In Chapter 6 some basic results in locally convex topological vector spaces are used and applied to fixed point theory in vector spaces Audience The book will be of value to graduate students researchers and applied mathematicians working in nonlinear analysis and probabilistic metric spaces **Probability** Measures on Metric Spaces K. R. Parthasarathy, 2014-07-03 Probability Measures on Metric Spaces presents the general theory of probability measures in abstract metric spaces This book deals with complete separable metric groups locally impact abelian groups Hilbert spaces and the spaces of continuous functions Organized into seven chapters this book begins with an overview of isomorphism theorem which states that two Borel subsets of complete separable metric spaces are

isomorphic if and only if they have the same cardinality This text then deals with properties such as tightness regularity and perfectness of measures defined on metric spaces Other chapters consider the arithmetic of probability distributions in topological groups This book discusses as well the proofs of the classical extension theorems and existence of conditional and regular conditional probabilities in standard Borel spaces The final chapter deals with the compactness criteria for sets of probability measures and their applications to testing statistical hypotheses This book is a valuable resource for statisticians

Nonlinear Operator Theory in Probablistic Metric Spaces Shih-sen Chang, Yeol Je Cho, Sin-min Kang, 2001 The purpose of this book is to give a comprehensive introduction to the study of non linear operator theory in probabilistic metric spaces This book is introduced as a survey of the latest and new results on the following topics Basic theory of probabilistic metric spaces Fixed point theorems for single valued and multi valued mappings in probabilistic metric spaces Ekeland s variational principle and Caristi's fixed point theorem in probabilistic metric spaces Coincidence point theorems minimisation and fixed degree theorems in probabilistic metric spaces Probabilistic contractors accretive mappings and topological degree in probabilistic normed spaces Nonlinear semigroups and differential equations in probabilistic metric spaces KKM theorems Fixed Point Theory in Probabilistic Metric Spaces O. Hadzic, E. minimax theorems and variational inequalities Pap, 2013-06-29 Fixed point theory in probabilistic metric spaces can be considered as a part of Probabilistic Analysis which is a very dynamic area of mathematical research A primary aim of this monograph is to stimulate interest among scientists and students in this fascinating field The text is self contained for a reader with a modest knowledge of the metric fixed point theory Several themes run through this book The first is the theory of triangular norms t norms which is closely related to fixed point theory in probabilistic metric spaces Its recent development has had a strong influence upon the fixed point theory in probabilistic metric spaces In Chapter 1 some basic properties of t norms are presented and several special classes of t norms are investigated Chapter 2 is an overview of some basic definitions and examples from the theory of probabilistic metric spaces Chapters 3 4 and 5 deal with some single valued and multi valued probabilistic versions of the Banach contraction principle In Chapter 6 some basic results in locally convex topological vector spaces are used and applied to fixed point theory in vector spaces Audience The book will be of value to graduate students researchers and applied mathematicians working in nonlinear analysis and probabilistic metric spaces **Probabilistic metric spaces** Berthold Schweizer, Abe Sklar, 1983 On Fixed Points in Uniform Spaces with Applications to Probabilistic Metric Spaces Seppo Heikkilä, Seppo Seikkala, 1978 Probabilistic Metric Spaces and Nonlinear Operator Theory Shih-sen Chang, Yeol Je Cho, Sin-min Kang, 1994 Lectures on Probabilistic Metric Spaces Berthold Schweizer, University of Arizona. Tardiff,1975 **Topologies for Probabilistic** Metric Spaces Richard Thomas Fritsche, 1967 Fixed Point Theory and Applications Yeol Je Cho, 2007-08 This volume deals with new topics in the areas of fixed point theory variational inequality and complementarity problem theory non linear

ergodic theory difference differential and integral equations control and optimisation theory dynamic system theory inequality theory stochastic analysis and probability theory and their applications **Products and Quotients of** Gradient Flows Luigi Ambrosio, Nicola Gigli, Giuseppe **Probabilistic Metric Spaces** Russell James Egbert, 1966 Savare, 2006-03-30 This book is devoted to a theory of gradient ows in spaces which are not nec sarily endowed with a natural linear or di erentiable structure. It is made of two parts the rst one concerning gradient ows in metric spaces and the second one 2.1 devoted to gradient ows in the L Wasserstein space of probability measures on p a separable Hilbert space X we consider the L Wasserstein distance p 1 as well The two parts have some connections due to the fact that the Wasserstein space of probability measures provides an important model to which the metric theory applies but the book is conceived in such a way that the two parts can be read independently the rst one by the reader more interested to Non Smooth Analysis and Analysis in Metric Spaces and the second one by the reader more oriented to the applications in Partial Di erential Equations Measure Theory and Probability Boolean Valued Probabilistic Metric Spaces Mickey Charles Holsey, 1989 In this paper the Boolean valued method is used to develop a theory closely resembling the theory of probabilistic metric spaces In this development the complete Boolean algebra used must have the form of the quotient algebra of some atomless probability space Omega cal A P modulo its class of null sets In this setting the real numbers in the Boolean valued model Vsp cal B correspond to random variables with domain Omega and the sets which act as binary operations on Re in the model correspond to binary operations on the class of random variables with domain Omega The next step is to generalize the theory of metric spaces by requiring the triangle inequality be satisfied for some generalized addition oplus i e some commutative associative nondecreasing binary operation on Resp which has 0 as identity If the generalized addition is continuous then the generalized metric space has a natural topology on it which satisfies the same general properties that metric topologies satisfy A Boolean valued probabilistic metric space is a triple tilde S cal D cal G which corresponds to some triple S d oplus in Vsp cal B which acts as a generalized metric space in the nonstandard model Thus tilde S is a subset of Vsp cal B cal D is a function which maps ordered pairs of elements of tilde S to a e nonnegative random variables and cal G is a binary operation on the class of a e nonnegative random variables. The topology on the generalized metric space in Vsp cal B corresponds to a topology on tilde S which is uniform There are a large number of probabilistic metric spaces which can be isomorphically injected into some Boolean valued probabilistic metric space This mapping is generally not a surjection due to the richer structure of the Boolean valued probabilistic metric space There are also probabilistic metric spaces which cannot be isomorphically injected into any Boolean valued probabilistic metric space This paper leads to several interesting lines of inquiry One of these is whether all uniform topological spaces may be obtained from some generalized metric space by the Boolean valued method and another is what systems in the sciences can Boolean valued probabilistic metric spaces be used to model Complete Probabilistic Metric Spaces and Random Variable Generated Spaces Howard Sherwood, 1966
