Fundamentals of Statistical Hydrology Mauro Naghettini, 2016-10-26 This textbook covers the main applications of statistical methods in hydrology It is written for upper undergraduate and graduate students but can be used as a helpful guide for hydrologists geographers meteorologists and engineers The book is very useful for teaching as it covers the main topics of the subject and contains many worked out examples and proposed exercises Starting from simple notions of the essential graphical examination of hydrological data the book gives a complete account of the role that probability considerations must play during modelling diagnosis of model fit prediction and evaluating the uncertainty in model predictions including the essence of Bayesian application in hydrology and statistical methods under nonstationarity The book also offers a comprehensive and useful discussion on subjective topics such as the selection of probability distributions suitable for hydrological variables On a practical level it explains MS Excel charting and computing capabilities demonstrates the use of Winbugs free software to solve Monte Carlo Markov Chain MCMC simulations and gives examples of free R code to solve nonstationary models with nonlinear link functions with climate covariates
