Probability In Social Science Mathematical Modelling:

Qualitative Mathematics for the Social Sciences Lee Rudolph, 2013 This book combines psychological and mathematical perspectives to analyse how qualitative mathematics can be used to create models of social and psychological processes

Mathematical Models for Society and Biology Edward Beltrami, 2002 Mathematical Modeling for Society and Biology engagingly relates mathematics to compelling real life problems in biology and contemporary society It shows how mathematical tools can be used to gain insight into these modern common problems to provide effective real solutions Beltrami's creative non threatening approach draws on a wealth of interesting examples pertaining to current social and biological issues Central ideas appear again in different contexts throughout the book showing the general unity of the modeling process The models are strikingly novel and based on issues of real concern Most have never appeared in book form Through the relevance of these models mathematics becomes not just figures and numbers but a means to a more refined understanding of the world

Probability in Social Science S. Goldberg, 2012-12-06 Birkhauser Boston Inc will publish a series of carefully selected monographs in the area of mathematical modeling to present serious applications of mathematics for both the undergraduate and the professional audience Some of the monographs to be selected and published will appeal more to the professional mathematician and user of mathematics serving to familiarize the user with new models and new methods Some like the present monograph will stress the educational aspect and will appeal more to a student audience either as a textbook or as additional reading We feel that this first volume in the series may in itself serve as a model for our program Samuel Goldberg attaches a high priority to teaching students the art of modeling that is to use his words the art of constructing useful mathematical models of real world phenomena We concur It is our strong conviction as editors that the connection between the actual problems and their mathematical models must be factually plausible if not actually real As this first volume in the new series goes to press we invite its readers to share with us both their criticisms and their constructive suggestions
