Caldwell, Neil Smith, 2016-10-18 Teaching primary computing without computers The Computing curriculum is a challenge for primary school teachers The realities of primary school resources mean limited access to computer hardware But computing is about more than computers Important aspects of the fundamental principles and concepts of computer science can be taught without any hardware Children can learn to analyse problems and computational terms and apply computational thinking to solve problems without turning on a computer This book shows you how you can teach computing through unplugged activities It provides lesson examples and everyday activities to help teachers and pupils explore computing concepts in a concrete way accelerating their understanding and grasp of key ideas such as abstraction logic algorithms and data representation The unplugged approach is physical and collaborative using kinaesthetic learning to help make computing concepts more meaningful and memorable This book will help you to elevate your teaching and your children's learning of computing beyond the available hardware It focuses on the building blocks of understanding required for computation thinking Teaching Computational Thinking and Coding in Primary Schools David Morris, Gurmit Uppal, David Wells, 2017-05-22 This is a guide to the teaching of computing and coding in primary schools and an exploration of how children develop their computational thinking It covers all areas of the National Curriculum for primary computing and offers insight into effective teaching The text considers three strands of computer science digital literacy and information technology The teaching of coding is especially challenging for primary teachers so it highlights learning on this giving practical examples of how this can be taught For all areas of the computing curriculum the text also provides guidance on planning age appropriate activities with step by step guides and details of educationally appropriate software and hardware This book helps you to connect what you need to teach with how it can be taught and opens up opportunities in the new curriculum for creative and imaginative teaching It also includes the full National Curriculum Programme of Study for Computing key stages 1 and 2 as a useful reference for trainee teachers **Book of Chess Problems** John K. realistic items The book shows by comparing test and interview data that many children as a consequence of their confusion over the requirements of realistic test items fail in tests to demonstrate mathematical knowledge and understanding that they actually possess The book also explores whether this problem of invalid measurement is equally spread across children from different social backgrounds and across the sexes The book will be of interest to academics and teachers studying for advanced degrees in mathematics education sociology of education and educational assessment
