Problems of Elastic Stability and Vibrations Vadim Komkov,1981 *Papers in Algebra, Analysis and Statistics* Australian Mathematical Society. Summer Research Institute,Rudolf Lidl,1982 Proceedings of the Northwestern Homotopy Theory Conference Haynes R. Miller,Stewart Priddy,1983 Symposium on Algebraic Topology in Honor of Jose Adem Samuel Gitler,1982 **Algebraists' Homage: Papers in Ring Theory and Related Topics** Shimshon A. Amitsur,David J. Saltman,George B. Seligman,1982 **Fixed Points and Nonexpansive Mappings** Robert C. Sine,1983 **Enumerative Algebraic Geometry** Steven L. Kleiman,Anders Thorup,1991 1989 marked the 150th anniversary of the birth of the great Danish mathematician Hieronymus George Zeuthen Zeuthen s name is known to every algebraic geometer because of his discovery of a basic invariant of surfaces However he also did fundamental research in intersection theory enumerative geometry and the projective geometry of curves and surfaces Zeuthen s extraordinary devotion to his subject his characteristic depth thoroughness and clarity of thought and his precise and succinct writing style are truly inspiring During the past ten years or so algebraic geometers have reexamined Zeuthen s work drawing from it inspiration and new directions for development in the field The 1989 Zeuthen Symposium held in the summer of 1989 at the Mathematical Institute of the University of Copenhagen provided a historic opportunity for mathematicians to gather and examine those areas in contemporary mathematical research which have evolved from Zeuthen s fruitful ideas This volume containing papers presented during the symposium as well as others inspired by it illuminates some currently active areas of research in enumerative algebraic geometry Inverse Scattering and Applications David H. Sattinger,1991 This book presents papers given at a Conference on Inverse Scattering on the Line held in June 1990 at the University of Massachusetts Amherst A wide variety of topics in inverse problems were covered inverse scattering problems on the line inverse problems in higher dimensions inverse conductivity problems and numerical methods In addition problems from statistical physics were covered including monodromy problems quantum inverse scattering and the Bethe ansatz One of the aims of the conference was to bring together researchers in a variety of areas of inverse problems which have seen intensive activity in recent years scattering **Value Distribution Theory and Its Applications** Chung-Chun Yang,1983 Topological Methods in Nonlinear Functional Analysis Sankatha Prasad Singh,S. Thomeier,B. Watson,1983 Covers the proceedings of the session on Fixed Point Theory and Applications held at the University of Toronto August 21 26 1982 This work presents theorems on the existence of fixed points of nonexpansive mappings and the convergence of the sequence of iterates of nonexpansive and quasi nonexpansive mappings **Central Extensions, Galois Groups, and Ideal Class Groups of Number Fields** Albrecht Fröhlich,1983 These notes deal with a set of interrelated problems and results in algebraic number theory in which there has been renewed activity in recent years The underlying tool is the theory of the central extensions and in most general terms the underlying aim is to use class field theoretic methods to reach beyond Abelian extensions One purpose of this book is to give an introductory survey assuming the basic theorems of class field theory as mostly recalled in section 1 and giving a central role to the Tate cohomology groups hat H 1 The principal aim is however to use the general theory as developed here together with the special features of class field theory over mathbf Q to derive some rather strong theorems of a very concrete nature with mathbf Q as base field The specialization of the theory of central extensions to the base field mathbf Q is shown to derive from an underlying principle of wide applicability The author describes certain non Abelian Galois groups over the rational field and their inertia subgroups and uses this description to gain information on ideal class groups of absolutely Abelian fields all in entirely rational terms Precise and explicit arithmetic results are obtained reaching far beyond anything available in the general theory The theory of the genus field which is needed as background as well as being of independent interest is presented in section 2 In section 3 the theory of central extension is developed The special features over mathbf Q are pointed out throughout Section 4 deals with Galois groups and applications to class groups are considered in section 5 Finally section 6 contains some remarks on the history and literature but no completeness is attempted **Lectures on Nielsen Fixed Point Theory** Boju Jiang,1983 Starting with the simplest examples this book gives an easy introduction to the subject then explains several very recent developments It makes available in the English language the covering space approach to Nielsen fixed point theory As far as research value is concerned the Nielsen theory of periodic points is published here for the first time and an exposition and improvement of the latest progress in the Nielsen theory of fiber maps is provided **Notices of the American Mathematical Society** American Mathematical Society,1982

Ordered Fields and Real Algebraic Geometry American Mathematical Society. Meeting,1982 *Umbral Calculus and Hopf Algebras* Robert A. Morris,1982 *Advanced Analytic Number Theory: Ramification theoretic methods* Carlos J. Moreno,1983 This book presents in a coherent way all the ramification results from local fields which are necessary for an understanding of new developments in advanced analytic number theory *Subject Catalog* Library of Congress,1982

Nonlinear Problems in Geometry Dennis M. DeTurck,1986 This book features current work in a broad area of modern geometric analysis The contributors represent a cross section of researchers working in areas of interaction between analytic methods and geometric problems The scope of their concerns is broad but three areas are treated in depth by several authors scalar curvature on complete manifolds spectral geometry and curvature tensor realization The papers are aimed primarily at researchers studying differential equations on manifolds though many of the papers address a more general audience as well The background required consists of basic training in and an appreciation of the problems of modern differential geometry experience with partial differential equations would be helpful as well **Complex Contour Integral Representation of Cardinal Spline Functions** Walter Schempp,1982 **Subject Guide to Books in Print** ,1996
