and the problem of demarcation which asks for a separating line between empirical science and non science Popper seeks to solve these two basic problems with his celebrated theory of falsifiability arguing that the inferences made in science are not inductive but deductive science does not start with observations and proceed to generalise them but with problems which it attacks with bold conjectures The Two Fundamental Problems of the Theory of Knowledge is essential reading for anyone interested in Karl Popper in the history and philosophy of science and in the methods and theories of science itself
