Proceedings of a Symposium on Large-Scale Digital Calculating Machinery Harvard Computation Laboratory, Harvard University, 1985-06 Coming before the establishment of professional journals societies or regular meetings in computer science the proceedings of the symposium offer the best picture of computing technology in the early years that we have available In January 1947 the Navy Department Bureau of Ordnance and Harvard University jointly sponsored a symposium at the Harvard Computation Laboratory on large scale digital calculating machinery It provided one of the first and most important early forums for discussion of the problems and approaches in the design construction operation and application of computers Coming before the establishment of professional journals societies or regular meetings in computer science the proceedings of the symposium offer the best picture of computing technology in the early years that we have available Included are papers by Howard Aiken Samuel Caldwell Jay Forrester Herman Goldstine John Mauchly George Stibitz and over twenty others **Proceedings of a Symposium on Large Scale Digital Calculating Machinery** was published in 1948 by Harvard University Press It is Volume VIII in the Charles Babbage Institute Reprint Series

Proceedings of a Symposium on Large-Scale Digital Calculating Machinery, 7-10 January 1947, 1948 Coming before the establishment of professional journals societies or regular meetings in computer science the proceedings of the symposium offer the best picture of computing technology in the early years that we have available **Proceedings of a Symposium on Large Scale Digital Calculating Machinery** William Aspray, 1985 [Proceedings of a Symposium on Large-Scale Digital Calculating Machinery, 7-10 January 1947](#), 1985 Coming before the establishment of professional journals societies or regular meetings in computer science the proceedings of the symposium offer the best picture of computing technology in the early years that we have available [Mensch-Computer-Interface](#) Hans Dieter Hellige, 2015-09-15 Die gegenwärtige Interface Krise bei digitalen Medien nehmen Informatiker und Informatikhistoriker in diesem Band zum Anlass für eine Langzeitbilanz der Mensch Computer Interaktion Sie legen sowohl Gesamtüberblicke der Entwicklung aus technischer und geistesgeschichtlicher Sicht vor als auch spezielle Studien zur Bedienproblematik einzelner Epochen Dadurch entsteht ein großer Bogen von den Bedienschnittstellen der frühen Mainframe Welt über die interaktiven PC Interfaces bis zu den neuesten Entwicklungen des Wearable Computing und der proaktiven Ambient Intelligence Die historisch genetischen Analysen münden in theoretische Betrachtungen und kritische Rückblicke auf die Forschung zu Mensch Computer Interfaces sowie Ausblicke auf die Zukunft **Alan Turing's Automatic Computing Engine : The Master Codebreaker's Struggle to build the Modern Computer** B. Jack Copeland, 2005-04-14 The mathematical genius Alan Turing 1912-1954 was one of the greatest scientists and thinkers of the 20th century Now well known for his crucial wartime role in breaking the ENIGMA code he was the first to conceive of the fundamental principle of the modern computer the idea of controlling a computing machine's operations by means of a program of coded instructions stored in the machine

s memory In 1945 Turing drew up his revolutionary design for an electronic computing machine his Automatic Computing Engine ACE A pilot model of the ACE ran its first program in 1950 and the production version the DEUCE went on to become a cornerstone of the fledgling British computer industry The first personal computer was based on Turing s ACE Alan Turing s Automatic Computing Engine describes Turing s struggle to build the modern computer The first detailed history of Turing s contributions to computer science this text is essential reading for anyone interested in the history of the computer and the history of mathematics It contains first hand accounts by Turing and by the pioneers of computing who worked with him As well as relating the story of the invention of the computer the book clearly describes the hardware and software of the ACE including the very first computer programs The book is intended to be accessible to everyone with an interest in computing and contains numerous diagrams and illustrations as well as original photographs The book contains chapters describing Turing s path breaking research in the fields of Artificial Intelligence AI and Artificial Life A Life The book has an extensive system of hyperlinks to The Turing Archive for the History of Computing an on line library of digital facsimiles of typewritten documents by Turing and the other scientists who pioneered the electronic computer

Biographies of Scientists for Sci-Tech Libraries Tony Stankus, 2019-12-05 This book first published in 1991 is an invaluable guide to biographies of scientists from a wide variety of scientific fields The books selected for this highly descriptive bibliography help librarians shatter readers stereotypes of scientists as monomaniacal and uninteresting people by providing interesting and provocative titles to capture the interest of students and other readers The biographies included in this very special bibliography were carefully selected for their humour and human insights to give future scientists encouragement inspiration and an understanding of the origins of particular scientific fields These biographies are unique in that they explore the whole personality of the scientist giving students a glimpse at the variety and drama of the lives beyond well known contributions or Nobel prize accomplishments

Howard Aiken I. Bernard Cohen, 2000 Biography of Howard Aiken a major figure of the early digital era by a major historian of science who was also a colleague of Aiken s at Harvard Howard Hathaway Aiken 1900 1973 was a major figure of the early digital era He is best known for his first machine the IBM Automatic Sequence Controlled Calculator or Harvard Mark I conceived in 1937 and put into operation in 1944 But he also made significant contributions to the development of applications for the new machines and to the creation of a university curriculum for computer science This biography of Aiken by a major historian of science who was also a colleague of Aiken s at Harvard offers a clear and often entertaining introduction to Aiken and his times Aiken s Mark I was the most intensely used of the early large scale general purpose automatic digital computers and it had a significant impact on the machines that followed Aiken also proselytized for the computer among scientists scholars and businesspeople and explored novel applications in data processing automatic billing and production control But his most lasting contribution may have been the students who received degrees under him and then took prominent positions in academia and industry I Bernard Cohen argues

convincingly for Aiken's significance as a shaper of the computer world in which we now live *Science at Harvard University* Clark A. Elliott, Margaret W. Rossiter, 1992-02 This collection of original historical essays examines aspects of the relationship between science and the nation's oldest academic institution This is history as viewed from the varying perspectives of a group of scholars for whom science at Harvard University is a significant component of their ongoing research Thus the essays are of specialist interest while collectively the volume is a case study of science in an institutional setting In conducting their research the authors have used a wealth of primary sources from the Harvard Archives and other repositories The volume opens with a thematic introduction by Margaret Rossiter reflecting the picture of Harvard science drawn in the several papers in the volume while suggesting ways in which a study of Harvard relates to and illuminates the history of science in America The subsequent papers follow a generally chronological sequence beginning with Sara Schechner Genuth's study of attitudes toward comets in relation to early Harvard University programs and functions Mary Ann James examines the beginnings of applied science at Harvard and Bruce Sinclair continues that theme with a comparative study of MIT and Harvard Toby Appel's paper on zoologist Jeffries Wyman identifies the special part that personal character plays in institutional history Curtis Hinsley concentrates on facilities and shows how the Peabody Museum gave rise to teaching in anthropology David Livingstone's biographical treatment of Nathaniel S Shaler reveals a number of intellectual strands running through the University in the late nineteenth century and John Parascandola's paper on L J Henderson likewise deals with a figure of wide influence and many interests ranging from biochemistry to sociology The latter topic leads to Lawrence Nichols's account of the rise of sociology at Harvard A view of the internal tensions within psychology are seen in Rodney Triplet's study of Henry A Murray I Bernard Cohen examines the relations among Howard Aiken IBM and Harvard in the development of the Mark I computer while Peggy Kidwell studies the Observatory community during World War II and its response to national defense and a developing federal support system Finally Clark Elliott considers the history of Harvard science as a field for study through a review of published literature and archival sources and makes suggestions for further investigation BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Alan Turing's Electronic Brain B. Jack Copeland, 2012-05-24 Well known for this crucial wartime role in breaking the ENIGMA code this book chronicles Turing's struggle to build the modern computer Includes first hand accounts by Turing and the pioneers of computing who worked with him *The Charles Babbage Institute Newsletter* , 1992

A Science of Operations Mark Priestley, 2011-02-14 Today computers fulfil a dazzling array of roles a flexibility resulting from the great range of programs that can be run on them A Science of Operations examines the history of what we now call programming defined not simply as computer programming but more broadly as the definition of the steps involved in computations and other information processing activities This unique perspective highlights how the history of programming is distinct from the history of the computer despite the close relationship between the two in the 20th century The book also

discusses how the development of programming languages is related to disparate fields which attempted to give a mechanical account of language on the one hand and a linguistic account of machines on the other Topics and features Covers the early development of automatic computing including Babbage's mechanical calculating engines and the applications of punched card technology examines the theoretical work of mathematical logicians such as Kleene Church Post and Turing and the machines built by Zuse and Aiken in the 1930s and 1940s discusses the role that logic played in the development of the stored program computer describes the standard model of machine code programming popularised by Maurice Wilkes presents the complete table for the universal Turing machine in the Appendices investigates the rise of the initiatives aimed at developing higher level programming notations and how these came to be thought of as languages that could be studied independently of a machine examines the importance of the Algol 60 language and the framework it provided for studying the design of programming languages and the process of software development and explores the early development of object oriented languages with a focus on the Smalltalk project This fascinating text offers a new viewpoint for historians of science and technology as well as for the general reader The historical narrative builds the story in a clear and logical fashion roughly following chronological order

Charles Babbage Institute Newsletter, 1979 **The Early British Computer Conferences** Michael R. Williams, Martin Campbell-Kelly, 1989 **A Manual of Operation for the Automatic Sequence Controlled Calculator**, 1985 If the Mark I itself was a milestone in digital computing so was this Manual it was one of the first publications to address the fundamental question of how to get a computer to solve problems

A History of Scientific Computing Stephen Nash, 1990 Essays about pioneers in the field of scientific and numeric computing John von Neumann James Wilkinson George Forsythe and Howard Aiken show how the drive to solve particular problems influenced the development of algorithms software and even computers Methods that have led to new tools in computer analysis such as the fast Fourier transform and finite element and iterative methods also are discussed as well as the contributions of scientific organizations like ACM and SIAM and institutions like the Los Alamos Laboratory and the former National Bureau of Standards The volume concludes with a view of numerical analysis in Europe and the Soviet Union Annotation copyrighted by Book News Inc Portland OR *Bibliographic Guide to Conference Publications* New York Public Library.
