## **Proceedings Of An International Conference On Dynamic Crack Propagation:**

Proceedings of an international conference on Dynamic Crack Propagation George C. Sih, 2013-06-29 The planning meeting for a conference on Dynamic Crack Propagation was held at M LT in February 1971 and attended by research workers from several industrial governmental and academic organizations It was felt that a more specialized meeting would provide a better opportunity for both U S and foreign researchers to exchange their ideas and views on dynamic fracture a subject which is seldom emphasized in national or international fracture conferences Dynamic crack propagation has been a concern to specialists in many fields continuum mechanics metallurgy geology polymer chemistry orthopedics applied mathematics as well as structural design and testing It impinges on a wide variety of problems such as rock breaking and earthquakes pressure vessels and line pipes comminution and the performance of armament and ordnance etc Advances have been numerous covering theories and experiments from both the microscopic and macroscopic points of view Hence the need for comparing the theoretical and experimental results and bridging the gaps between the atomistic and continuum approaches must be constantly emphasized It also appeared that the overall problem of dynamic fracture could benefit from a consolidation of crack models proposed for the various types of materials metals ceramics composites rocks glasses polymers and biomaterials

United States. Energy Research and Development Administration,1976      **Dynamic fracture** M.L. Williams,W.G. Knauss,2012-12-06 From time to time the International Journal of Fracture has presented matters thought to be of special interest to its readers In previous special issues December 1980 and April 1981 Dr H W Liu as Guest Editor presented a series of review papers dealing with fatigue processes and characteristics in metals and non metals Continuing this policy which is consistent with our stated objectives a second review dealing with time dependence in the fracture process including the effect of material inertia but essentially excluding very strong shock effects in solids has been assembled under the generic term dynamic fracture We hope that the ensuing state of the art review will yield an instructive and timely product which readers will find useful To assist us in presenting this subject we have prevailed upon a well known worker in dynamic fracture Dr W G Knauss Professor of Aeronautics and Applied Mechanics California Institute of Technology to act as Guest Editor for this special double issue On behalf of the editors and publisher I wish to express our indebtedness to Professor Knauss and his invited authors for undertaking this special effort      Proceedings of the First International Conference on Steel & Composite Structures Chang-Koon Choi,Hyo-Gyoung Kwak,2001      *Applied Mechanics Reviews* ,1973      **Gesamtverzeichnis der Kongress-Schriften in Bibliotheken der Bundesrepublik Deutschland einschliesslich Berlin (West): Registerband** Staatsbibliothek Preussischer Kulturbesitz. **Comprehensive Structural Integrity** Ian Milne,R. O. Ritchie,B.L. Karihaloo,2003-07-25 The aim of this major reference work is to provide a first point of entry to the literature for the researchers in any field relating to structural integrity in the form of a definitive research reference tool which links the various sub disciplines that comprise the whole of structural integrity Special emphasis will be given to the interaction between mechanics and materials and structural integrity applications Because of the interdisciplinary and applied nature of the work it will be of interest to mechanical engineers and materials scientists from both academic and industrial backgrounds including bioengineering interface engineering and nanotechnology The scope of this work encompasses but is not restricted to fracture mechanics fatigue creep materials dynamics environmental degradation numerical methods failure mechanisms and damage mechanics interfacial fracture and nano technology structural analysis surface behaviour and heart valves The structures under consideration include pressure vessels and piping off shore structures gas installations and pipelines chemical plants aircraft railways bridges plates and shells electronic circuits interfaces nanotechnology artificial organs biomaterial prostheses cast structures mining and more Case studies will form an integral part of the work      *Comprehensive Structural Integrity* I.
