Proceedings Of The 10th International Symposium On Insect Plant Relations:

Proceedings of the 10th International Symposium on Insect-Plant Relationships Stephen J. Simpson,A. Jennifer Mordue,Jim Hardie,2013-04-17 Over the past 40 years the SIP meetings have played a central role in the development of the field of insect plant relationships providing both a show case for current research as well as a forum for the airing and development of influential new ideas The 10th symposium held 4 10 July 1998 in Oxford followed that tradition The present volume includes a representative selection of fully refereed papers from the meeting plus a listing of the titles of all presentations The volume includes reviews of major areas within the subject along with detailed experimental studies Topics covered include central neural and chemosensory bases of host plant recognition integrative studies of insect behaviour tritrophic interactions plant defences insect life histories plant growth responses microbial partners in insect plant associations and genetic bases of host plant associations The book provides a key source for students and research workers in the field of insect plant relationships [Proceedings of the 10th International Symposium on Insect-Plant Relationships](#)

Stephen J. Simpson,A. Jennifer Mordue,Jim Hardie,2014-01-15 **Proceedings of the 10th International Symposium on Insect-Plant Relations** International Symposium on Insect Plant Relationships,Stephen J. Simpson,1999 **Insect-Plant Biology** Louis M. Schoonhoven,Joop J. A. van Loon,Marcel Dicke,2005-12 Half of all insect species are dependent on living plant tissues consuming about 10% of plant annual production in natural habitats and an even greater percentage in agricultural systems despite sophisticated control measures Plants are generally remarkably well protected against insect attack with the result that most insects are highly specialized feeders The mechanisms underlying plant resistance to invading herbivores on the one side and insect food specialization on the other are the main subjects of this book For insects these include food plant selection and the complex sensory processes involved with their implications for learning and nutritional physiology as well as the endocrinological aspects of life cycle synchronization with host plant phenology In the case of plants exposed to insect herbivores they include the activation of defence systems in order to minimize damage as well as the emission of chemical signals that may attract natural enemies of the invading herbivores and may be exploited by neighbouring plants that mount defences as well Insect Plant Biology discusses the operation of these mechanisms at the molecular and organismal levels in the context of both ecological interactions and evolutionary relationships In doing so it uncovers the highly intricate antagonistic and mutualistic interactions that have evolved between plants and insects The book concludes with a chapter on the application of our knowledge of insect plant interactions to agricultural production This multidisciplinary approach will appeal to students in agricultural entomology plant sciences ecology and indeed anyone interested in the principles underlying the relationships between the two largest groups of organisms on earth plants and insects **BOOK JACKET** Title Summary field provided by Blackwell North America Inc All Rights Reserved **Biological Control of Weeds in Australia** Jim Cullen,Mic Julien,Rachel McFadyen,2012-03-05 Biological control of weeds has been

practised for over 100 years and Australia has been a leader in this weed management technique The classical example of control of prickly pears in Australia by the cactus moth *Cactoblastis cactorum* which was imported from the Americas helped to set the future for biocontrol of weeds in many countries Since then there have been many projects using Classical Biological Control to manage numerous weed species many of which have been successful Importantly there have been no serious negative non target impacts the technique when practised as it is in Australia is safe and environmentally friendly Economic assessments have shown that biocontrol of weeds in Australia has provided exceedingly high benefit to cost ratios This book reviews biological control of weeds in Australia to 2011 covering over 90 weed species and a multitude of biological control agents and potential agents Each chapter has been written by practising biological control of weeds researchers and provides details of the weed the history of its biological control exploration for agents potential agents studied and agents released and the outcomes of those releases Many weeds were successfully controlled some were not many projects are still underway some have just begun however all are reported in detail in this book Biological Control of Weeds in Australia will provide invaluable information for biological control researchers in Australia and elsewhere Agents used in Australia could be of immense value to other countries that suffer from the same weeds as Australia The studies reported here provide direction to future research and provide examples and knowledge for researchers and students
