PSA 1976: Symposia Peter D. Asquith, 1976      **Proceedings of the 1976 Biennial Meeting of the Philosophy of Science Association** Philosophy of Science Association. Proceedings, 1976      *Issues and Images in the Philosophy of Science* D. Ginev, Robert S. Cohen, 2012-12-06 Azarya Polikarov was born in Sofia on October 9 1921 Through the many stages of politics economy and culture in Bulgaria he maintained his rational humanity and scientific curiosity He has been a splendid teacher and an accomplished critical philosopher exploring the conceptual and historical vicissitudes of physics in modern times and also the science policies that favor or threaten human life in these decades Equally and easily at home both within the Eastern and Central European countries and within the Western world Polikarov is known as a collaborating genial colleague a working scholar not at all a visiting academic tourist He understands the philosophy of science from within in all its developments from the classical beginnings through the great ages of Galilean Newtonian Maxwellian science to the times of the stunning discoveries and imaginative theories of his beloved Einstein and Bohr of the twentieth century Moreover his understanding has come along with a deep knowledge of the scientific topics in themselves Looking at our Appendix listing his principal publications we see that Polikarov's public research career after years of science teaching and popular science writing began in the fifties in Bulgarian Russian and German journals      *PSA 1976 Philosophy of Science Association*, Peter D. Asquith, 1976      **Saeculum** Georg Stadtmüller, 1983 Jahrbuch für Universalgeschichte      *Nietzsche, Epistemology, and Philosophy of Science* Babette Babich, Robert S. Cohen, 1999-08-31 Nietzsche Epistemology and Philosophy of Science is the second volume of a collection on Nietzsche and the Sciences featuring essays addressing truth epistemology and the philosophy of science with a substantial representation of analytically schooled Nietzsche scholars This collection offers a dynamic articulation of the differing strengths of Anglo American analytic and contemporary European approaches to philosophy with translations from European specialists notably Carl Friedrich von Weizsäcker Paul Valadier and Walther Ch Zimmerli This broad collection also features a preface by Alasdair MacIntyre Contributions explore Nietzsche's contributions to the philosophy of language and epistemology and include essays on the social history of truth and the historical and cultural analyses of Serres and Baudrillard as well as new contributions to the philosophy of science including theological and hermeneutical approaches history of science the philosophy of medicine cognitive science and technology

**Spanish Studies in the Philosophy of Science** Gonzalo Munévar, 2012-12-06 An anthology of contemporary philosophy of science in Spain Essays on 19th Century physics the new cosmology philosophy of biology scientific rationality philosophy of mathematics phenomenology's account of scientific progress science and ethics philosophy of economics methodology and the philosophy of technology      **Realism and Anti-Realism in the Philosophy of Science** Robert S. Cohen, R. Hilpinen, Ren-Zong Qiu, 2013-03-09 Beijing International Conference 1992      Hermeneutic Philosophy of Science, Van Gogh's Eyes, and God B.E. Babich, 2013-06-29 perceptual essences that can be rendered directly manifest in perception with

the help of theoretically structured instruments serving as readable technologies Scientific knowledge should thus be understood as an extension of unassisted perception A perceptual fact has an outer horizon which separates it from the ground on which it appears and an inner horizon composed of a multiplicity of possible perceptual profiles organized by an invariant essence The perceiving subject can bring forth a representative sample of the profiles in question occasionally by making use of certain technological processes which are themselves subject to interpretation in terms of theoretical representations The theoretical entities described in these representations are not simply detected thanks to an inferential operation but rather they are directly perceived It follows from this that the correspondence between the manifest image and the scientific image is not done one to one but by a many to one or one to many application between contextually defined perceptual objects within contexts that are mutually incompatible but complementary This should not however be understood as a form of conventionalism nor as a form of cultural relativism Pre comprehension which guides interpretation imposes strict limits to the descriptive categories which can be used and to the manner in which they can be linked to appropriate empirical objects The author applies his hermeneutic principles to the study of visual perception In fact this question is treated in the first part of the book

### **The Concept of Scientific Law in the Philosophy of Science and Epistemology**

Igor Hanzel, 2013-03-14 The author argues that a reconstruction of scientific laws should give an account of laws relating phenomena to underlying mechanisms generating them as well as of laws relating this mechanism to its inherent capacities While contemporary philosophy of science deals only with the former the author provides the concept for the reconstruction of scientific laws where the knowledge of the phenomena enables one to grasp the quantity of their cause He then provides the concepts for scientific laws dealing with the relation of the quantity and quality of the cause underlying phenomena to the quality and quantity of its capacities Finally he provides concepts for scientific laws expressing how a certain cause due to the quantity and quality of its capacities generates the quantitative and qualitative determinations of its manifestations The book is intended for philosophers of science and philosophers of social science as well as for natural and social scientists

*Mechanics and Natural Philosophy before the Scientific Revolution* Walter Roy Laird, Sophie Roux, 2008-01-01 Modern mechanics was forged in the seventeenth century from materials inherited from Antiquity and transformed in the period from the Middle Ages through to the sixteenth century These materials were transmitted through a number of textual traditions and within several disciplines and practices including ancient and medieval natural philosophy statics the theory and design of machines and mathematics This volume deals with a variety of moments in the history of mechanics when conflicts arose within one textual tradition between different traditions or between textual traditions and the wider world of practice Its purpose is to show how the accommodations sometimes made in the course of these conflicts ultimately contributed to the emergence of modern mechanics The first part of the volume is concerned with ancient mechanics and its transformations in the Middle Ages the second part with the reappropriation of ancient mechanics and especially with the reception of the Pseudo Aristotelian *Mechanica* in the Renaissance and the third and final part with early modern mechanics in specific social national and institutional contexts *Philosophische Abhandlungen*, 1935 *PSA* 1976, 1977 **PSA 1976** Philosophy of Science Association, 1976

**Holismus und Elementarismus in der Systemtheorie** Hans-Gerd Röwer, 1985 Systemdenken wird oft angeführt um die Überlegenheit ganzheitlichen Vorgehens eines angeblich wieder etablierten holistischen Paradigmas über analytisches oder mechanistisches Procedieren darzutun Vorliegende Untersuchung bemüht sich zu klären inwieweit man sinnvoll von ganzheitlichem und im Gegensatz dazu von elementaristischem Systemdenken reden kann und worin mögliche Vor- und Nachteile beider Ansätze bestehen Dabei ergibt sich dass Holisten wenig Grund haben sich um die Prävalenz ihres Standpunkts zu beweisen auf den systems approach zu berufen
