,2009 Highway agencies across the nation are moving towards implementation of the new AASHTO Mechanistic Empirical
Pavement Design Guide MEPDG for pavement design The benefits of implementing the MEPDG for routine use in Ohio
includes 1 achieving more cost effective and reliable pavement designs 2 lower initial and life cycle costs to the agency and 3
reduced highway user impact due to lane closures for maintenance and rehabilitation of pavements Implementation of the
MEPDG is a process that requires time and agency resources staffing training testing facilities including equipment and so
on A key requirement is validating the MEPDG s nationally calibrated pavement distress and smoothness prediction models
when applied under Ohio conditions and performing local calibration if needed Feasibility of using the MEPDG s national
models in Ohio was investigated under this study using data from a limited number of LTPP projects located in Ohio Results
based on limited data showed inadequate goodness of fit and significant bias in a number of the MEPDG new HMA pavement
and JPCP performance prediction models Limited recalibration of these models showed promising results indicating that a
full scale recalibration effort using a more extensive database assembled from projects located throughout the state is
