Absatzsysteme für Mass Customization Stephan Jäger,2013-03-08 Ausgehend von den Potenzialen der Mass Customization analysiert Stephan J ger verschiedene Absatzsystemtypen hinsichtlich ihrer konomischen Eignung in einem Mass Customization Konzept und beurteilt sie anhand von Economies of integration und Economies of interaction IPA — Concepts and Applications in Engineering Jerzy Pokojski,2003-11-03 In professional practice many designers collect and maintain personal notes as guidelines about experiences and insights for handling technical problems and design situations

An intelligent personal assistant IPA can act as a database for these notes making the entire design process more efficient Based on real industrial procedures this book contains practical examples for professionals and students interested in real implementations of knowledge based systems in engineering It integrates two major ideas a computer system integrating computer design tools and a computer system fulfilling the role of an intelligent personal assistant This user friendly approach to the main ideas concepts and techniques shows how an IPA can serve as a significant and fruitful knowledge based technique in engineering design

Integration of Process Knowledge into Design Support Systems Hubert Kals,Fred van Houten,1999-03-31 This book presents selected papers from the 1999 CIRP International Design Seminar Design is a fundamental creative human activity This certainly applies to the design of artifacts the realisation of which has to meet ever increasing demands All ideas for new and better artifacts have been elaborated by designers who have turned them into feasible concepts and finally transformed them into realisable product models Design knowledge is difficult to capture Design as a process is difficult to organise The analysis and structuring of design process knowledge is necessary in order to build design support systems Furthermore substantial research effort is still needed to develop design as a science of synthesis The principles of synthesis need to be better understood before design methods and computer support tools can be developed which are fit for integration in the industrial manufacturing process This volume includes an introduction to design theories and methods design and engineering processes the role of computer support tools and artificial intelligence in design support The other contributions can be divided roughly into two categories The first category deals with design support tools in relation to such topics as conceptual design collaborative design modelling design optimization and evaluation The second category treats the control of design and engineering processes in relation to subjects such as product and process knowledge process representation synthesis of thought and methods integration and concurrency

Intelligent Knowledge-Based Systems Cornelius T. Leondes,2010-04-28 For most of our history the wealth of a nation was limited by the size and stamina of the work force Today national wealth is measured in intellectual capital Nations possessing skillful people in such diverse areas as science medicine business and engineering produce innovations that drive the nation to a higher quality of life To better utilize these valuable resources intelligent knowledge based systems technology has evolved at a rapid and significantly expanding rate Reflecting the most fascinating AI based research and its broad practical applications intelligent knowledge based systems technology is being utilized by nations to

improve their medical care advance their engineering technology and increase their manufacturing productivity as well as play a significant role in a very wide variety of other areas of activity of substantive significance Today in the beginning of the 21st century it is difficult to imagine the development of the modern world without extensive use of the AI information technology that is rapidly transforming the global knowledge based economy as well as entire societies The breadth of the major application areas of intelligent knowledge based systems technology is very impressive These include among other areas Agriculture Business Chemistry Communications Computer Systems Education Electronics Engineering Environment Geology Image Processing Information Management Law Manufacturing Mathematics Medicine Meteorology Military Mining Power Systems Science Space Technology and Transportation The great breadth and expanding significance of this field on the international scene require a multi volume major reference work for an adequately substantive treatment of the subject Intelligent Knowledge Based Systems Business and Technology in The New Millennium This work consists of the following distinctly titled and well integrated volumes Volume I Knowledge Based Systems Volume II Information Technology Volume III Expert and Agent Systems Volume IV Intelligent Systems Volume V Neural Networks This five volume set clearly manifests the great significance of these key technologies for the new economies of the new millennium The Volumes Volume 1 Knowledge Based Systems addresses the basic question of how accumulated data and staff expertise from business operations can be abstracted into useful knowledge and how such knowledge can be applied to ongoing operations The wide range of areas represented includes product innovation and design intelligent database exploitation and business model analysis Eleven chapters Volume 2 Information Technology addresses the important question of how data should be stored and used to maximize its overall value Case studies examine a wide variety of application areas including product development manufacturing product management and product pricing Ten chapters Volume 3 Expert and Agent Systems considers such application areas as image databases business process monitoring e commerce and production planning and scheduling offering a wide range of perspectives and business function concentrations to stimulate readers innovative thought Ten chapters Volume 4 Intelligent Systems discusses applications in such areas as mission critical functions business forecasting medical patient care and product design and development Nine chapters Volume 5 Neural Networks Fuzzy Theory and Genetic Algorithm Techniques explores applications in such areas as bioinformatics product life cycle cost estimating product development computer aided design product assembly and facility location Ten chapters The discussions in these volumes provide a wealth of practical ideas intended to foster innovation in thought and consequently in the further development of technology Together they comprise a significant and uniquely comprehensive reference source for research workers practitioners computer scientists academics students and others on the international scene for years to come
