Proceedings of the Fourteenth Annual ACM Symposium on Principles of Distributed Computing ,1995 **Proceedings of the ... Annual ACM Symposium on Principles of Distributed Computing** ,2003 **Proceedings of the Fourteenth Annual ACM Symposium on Principles of Distributed Computing** ,1999 **Programming Multicore and Many-core Computing Systems** Sabri Pllana,Fatos Xhafa,2017-01-23 Programming multi core and many core computing systems Sabri Pllana Linnaeus University Sweden Fatos Xhafa Technical University of Catalonia Spain Provides state of the art methods for programming multi core and many core systems The book comprises a selection of twenty two chapters covering fundamental techniques and algorithms programming approaches methodologies and frameworks scheduling and management testing and evaluation methodologies and case studies for programming multi core and many core systems Program development for multi core processors especially for heterogeneous multi core processors is significantly more complex than for single core processors However programmers have been traditionally trained for the development of sequential programs and only a small percentage of them have experience with parallel programming In the past only a relatively small group of programmers interested in High Performance Computing HPC was concerned with the parallel programming issues but the situation has changed dramatically with the appearance of multi core processors on commonly used computing systems It is expected that with the pervasiveness of multi core processors parallel programming will become mainstream The pervasiveness of multi core processors affects a large spectrum of systems from embedded and general purpose to high end computing systems This book assists programmers in mastering the efficient programming of multi core systems which is of paramount importance for the software intensive industry towards a more effective product development cycle Key features Lessons challenges and roadmaps ahead Contains real world examples and case studies Helps programmers in mastering the efficient programming of multi core and many core systems The book serves as a reference for a larger audience of practitioners young researchers and graduate level students A basic level of programming knowledge is required to use this book Languages and Compilers for Parallel Computing Lawrence Rauchwerger,2019-11-19 This book constitutes the proceedings of the 30th International Workshop on Languages and Compilers for Parallel Computing LCPC 2017 held in College Station TX USA in October 2017 The 17 full papers presented together with abstracts of 5 keynote talks 11 invited speakers and 4 poster papers in this volume were carefully reviewed and selected from 26 submissions LCPC encourages submissions that go outside its original scope of scientific computing to diverse areas that are enable or enhanced by the power of parallel systems such as mobile computing big data relevant aspects of machine learning data centers cognitive computing etc LCPC strongly encourages personal interaction and technical discussions along the initial material **The Art of Multiprocessor Programming** Maurice Herlihy,Nir Shavit,Victor Luchangco,Michael Spear,2020-09-08 The Art of Multiprocessor Programming Second Edition provides users

with an authoritative guide to multicore programming This updated edition introduces higher level software development skills relative to those needed for efficient single core programming and includes comprehensive coverage of the new principles algorithms and tools necessary for effective multiprocessor programming The book is an ideal resource for students and professionals alike who will benefit from its thorough coverage of key multiprocessor programming issues Features new exercises developed for instructors using the text with more algorithms new examples and other updates throughout the book Presents the fundamentals of programming multiple threads for accessing shared memory Explores mainstream concurrent data structures and the key elements of their design as well as synchronization techniques from simple locks to transactional memory systems

Proceedings of the Twenty-Second Annual ACM Symposium on Principles of Distributed Computing, 2003 This paper presents an efficient asynchronous protocol to compute RSA inverses with respect to a public RSA modulus N whose factorization is secret and shared among a group of parties Given two numbers x and e the protocol computes y such that $ye \equiv x \pmod{N}$ A synchronous protocol for this task has been presented by Catalano Gennaro and Halevi Eurocrypt 2000 but the standard approach for turning this into an asynchronous protocol would require a Byzantine agreement sub protocol Our protocol adopts their approach but exploits a feature of the problem in order to avoid the use of a Byzantine agreement primitive Hence it leads to efficient asynchronous protocols for threshold signatures and for Byzantine agreement based on the strong RSA assumption without the use of random oracles

Self-Stabilizing Systems
Sukumar Ghosh, Ted Herman, 1997-08-15 Self governing control is a defining characteristic of autonomous computing machinery Autonomy implies some degree of independence and when a system's ability to achieve its mission is independent of how it is initialized the system is self stabilizing Application of self stabilization to system and network components is motivated by core concerns of fault tolerance in distributed systems Self stabilization is a solution to problems of transient memory faults and systems with dynamic reconfigurations Research in self stabilization explores many of the classic themes of distributed computing distributed graph algorithms mutual exclusion distributed agreement Recent papers combine self stabilization with traditional forms of fault tolerance consider methodological issues for the design of self stabilizing systems investigate randomized techniques and apply stabilization to new networking models The workshop brings together concerns from theory and practice of self stabilization
