Readings in Qualitative Reasoning about Physical Systems describes the automated reasoning about the physical world using
qualitative representations This text is divided into nine chapters each focusing on some aspect of qualitative physics The
first chapter deal with qualitative physics which is concerned with representing and reasoning about the physical world The
goal of qualitative physics is to capture both the commonsense knowledge of the person on the street and the tacit
knowledge underlying the quantitative knowledge used by engineers and scientists The succeeding chapter discusses the
qualitative calculus and its role in constructing an envisionment that includes behavior over both mythical time and elapsed
time These topics are followed by reviews of the mathematical aspects of qualitative reasoning history based simulation and
temporal reasoning as well as the intelligence in scientific computing The final chapters are devoted to automated modeling
for qualitative reasoning and causal explanations of behavior These chapters also examine the qualitative kinematics of
reasoning about shape and space This book will prove useful to psychologists and psychiatrists *Publication Catalog of the*
