Proceedings Of International Symposium On The Qinghaixizang Plateau:

Regional Hydrological Response to Climate Change J.A. Jones, Changming Liu, Ming-Ko Woo, Hsiang-Te Kung, 2012-12-06

This volume arises from the work of the International Geographical Union Working Group on Regional Hydrological Response to Climate Change and Global Warming under the chairmanship of Professor Changming Liu 1992-96. The book consists mostly of peer reviewed papers delivered at the Working Group's first three scientific meetings held in Washington D C 1992, Lhasa Tibet 1993 and Moscow 1995. These have been supplemented by a few additional chapters that have been specifically commissioned in order to give a well rounded coverage of the global and scientific aspects of the topic. As editors we have sought to balance state of the art reviews of methodology and regional research with detailed studies of specific countries and river basins. In the spirit of the IGU we have devoted particular effort to encouraging contributions from scientists in the non English speaking world. These chapters provide valuable evidence of recent climatic change and predictions of future hydrological impacts from parts of the world where little detailed work has been conducted hitherto. They provide much valuable information that is new and interesting to an international audience and is otherwise very difficult or impossible to acquire. It is hoped that the present volume will be not only a record of current achievements but also a stimulus to further hydrological research as the detail and spatial resolution of Global Climate Models improves. One notable aspect that emerges from a number of the contributions is that many though by no means all recent hydrological trends are in line with global warming predictions.

Glaciological Data World Data Center A for Glaciology, 1977 **Permafrost Bibliography Update, 1988-1992**, 1993 **Ecosystems of Disturbed Ground** L.R. Walker, 1999-12-17

As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore. The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely. Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance. This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground. Natural disturbances such as erosion, volcanoes, wind, herbivory, flooding and drought plus anthropogenic disturbances such as forestry, grazing, mining, urbanization and military actions are considered. Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance. Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes, nutrient cycles, primary productivity, succession, animal behaviour and competition. Humans react to disturbances by avoiding, exacerbating or restoring them or by passing environmental legislation. All of these issues are covered in this book. Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance. Multiple disturbances have a complex effect on both physical and biotic processes as they interact. This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive

documentation **Big bone disease : a multidisciplinary approach of Kashin-Beck disease in Tibet Autonomous Region (P.R. China)** Malaisse, François, Mathieu, Françoise, 2008 Kashin Beck disease is probably one of the most neglected diseases It occurs in only a very limited part of the world in a crescent shape area situated from South East Siberia to North West China It affects mainly the rural population of these remote regions and more specifically the children They are suffering from a lot of joint pain and lose their mobility They stop to grow properly and they became severely handicapped Since more than 15 years an international team together with his partner the Centre for Disease Control and Prevention of Tibet Autonomous Region are studying this disease with sometimes very limited means but always in a marvellous environment Their daily workmates are the lovely children the yaks and other animals of the Himalaya region as well as the unique variety of flowers and plants under the beautiful shadow of some of the highest peaks of the world Their unique multidisciplinary approach of the complex issue of the Kashin Beck disease is done with a constant worry of a better knowledge of the environment and its population Through a lot of beautiful pictures and some more scientific data the authors with an immoderate enthusiasm will drive you along the valleys of the high Tibetan plateau and will accompany you for a visit from one village to another to meet these patients and understand the difficulties of their daily life Proceedings of the ...
