*Non-accelerator Particle Astrophysics - Proceedings Of The 4th School* Giorgio Giacomelli, Nello Paver, Richard A Carrigan Jr, E Bellotti, 1996-07-13 The volume presents a broad coverage of this timely subject. The work is up to date and detailed enough to constitute a fine reference for experimental as well as for theoretical physicists but also maintains an informative pedagogical tone so that it can serve as the basis for a modern course on the subject. Major sections include fundamentals of particle physics with results from accelerator experiments, the particle cosmology interface, neutrino physics, large scale searches for proton decay and for exotic matter in the universe, neutrino astronomy, the physics of cosmic rays and gamma ray astronomy. A portion of the volume deals with facilities and instrumentation for particle astrophysics and on data acquisition.

**TeV Gamma-Ray Astrophysics** Heinrich J. Völk, Felix A. Aharonian, 2012-12-06 The International Heidelberg Workshop on TeV Gamma Ray Astrophysics brought together astrophysicists from the various fields which play a role in the formation of high energy gamma ray emission. In particular, theoretical and observational aspects of the physics and astrophysics of pulsars and quasars, the acceleration of particles at Supernova Remnants and other strong astrophysical shock fronts and cascade processes in universal background photon fields were comprehensively discussed in more than thirty reviews by leading experts. In their entirety, these reviews describe the birth of a new field of astronomy. This field concerns cosmic gamma rays of very high energy which are observed with ground based optical telescopes due to the Cherenkov emission of the secondary particles created by the interaction of these gamma rays with atoms in the Earth's atmosphere. Beyond that, the workshop encompassed the latest developments and trends in theory and observation of cosmic gamma ray sources of all energies from nuclear gamma ray lines in the MeV region through the Bremsstrahlung, Inverse Compton and pion decay continuum emission to gamma rays due to the decay of exotic relics from the early Universe. Audience: Specialists as well as students in physics and astrophysics and young research workers.

The Gamma Ray Sky with Compton GRO and SIGMA M. Signore, P. Salati, G. Vedrenne, 2012-12-06 This volume consists of invited lectures and seminars presented at the NATO Advanced Study Institute The Gamma Ray Sky with COMPTON GRO and SIGMA which was held at the Centre de Physique Theorique of Les Houches, France, in January-February 1994. The school has been planned by a Scientific Organizing Committee. It was organized with the aim of providing students and young researchers with an up to date account of the high energy phenomena in the vicinity of compact objects and the diffuse gamma ray backgrounds after the early results from the gamma ray telescope SIGMA and the four instruments onboard COMPTON GRO: Gamma Ray Observatory BATSE, Burst and Transient Source Experiment COMPTEL, Compton Telescope

EGRET Energetic Gamma Ray Experiment Telescope and OS SE Oriented Scintillation Spectrometer Experiment It was attended by more than sixty researchers from many countries The lectures and seminars represent a complete coverage of our present knowledge and understanding of Gamma ray backgrounds Gamma ray Bursts Active Galactic Nuclei Galactic Compact Objects Gamma ray Spectroscopy Instrumentation and observation techniques etc Most of these lectures are reproduced in this volume Unfortunately a few lecturers have chosen not to submit their manuscript

Kondo, 2012-12-06 ROSAT Observations G HASINGER Max Planck Institut für extraterrestrische Physik D 85740 Garching Germany Abstract This review describes the most recent advances in the study of the extragalactic soft X ray background and what we can learn about its constituents The deepest pointed observations with the ROSAT PSPC are discussed The logN logS relation is presented which reaches to the faintest X ray fluxes and to the highest AGN surface densities ever achieved The N S relation shows a 2 density in excess of 400 deg at the faintest fluxes and a flattening below the Einstein Deep Survey limit About 60% of the extragalactic background has been resolved in the deepest field Detailed source spectra and first optical and radio identifications will be discussed The results are put into perspective of the higher energy X ray background Key words X rays background radiations active galactic nuclei 1 Introduction The extragalactic X ray background XRB discovered about 30 years ago has been studied extensively with many X ray experiments in particular with the satellite HEAO I and II see e.g. Boldt 1987 and with ROSAT e.g. Hasinger et al 1993 Figure 1 shows a compilation of some of the most recent spectral measurements for the X ray background Over the energy range from 3 to about 100 keV its spectrum can be well approximated by an optically thin thermal bremsstrahlung model with kT 40 keV while at lower X ray energies a steepening into a new component has been
