two player games The problem of approximate Nash equilibrium in a two player game poses a unique technical challenge it is a member of the class PPAD which captures the complexity of several fundamental total problems i e problems that always have a solution and it also admits a quasipolynomial time algorithm Either property alone is believed to place this problem far below NP hard problems in the complexity hierarchy having both simultaneously places it just above P at what can be called the frontier of intractability Indeed the tools we develop in this book to advance on this frontier are useful for proving hardness of approximation of several other important problems whose complexity lies between P and NP Brouwer s fixed point market equilibrium CourseMatch A CEEI densest k subgraph community detection VC dimension and Littlestone dimension and signaling in zero sum games *Sampling Techniques for Supervised or Unsupervised Tasks* Frédéric Ros,Serge Guillaume,2019-10-26 This book describes in detail sampling techniques that can be used for unsupervised and supervised cases with a focus on sampling techniques for machine learning algorithms It covers theory and models of sampling methods for managing scalability and the curse of dimensionality their implementations evaluations and applications A large part of the book is dedicated to database comprising standard feature vectors and a special section is reserved to the handling of more complex objects and dynamic scenarios The book is ideal for anyone teaching or learning pattern recognition and interesting teaching or learning pattern recognition and is interested in the big data challenge It provides an accessible introduction to the field and discusses the state of the art concerning sampling techniques for supervised and unsupervised task Provides a comprehensive description of sampling techniques for unsupervised and supervised tasks Describe implementation and evaluation of algorithms that simultaneously manage scalable problems and curse of dimensionality Addresses the role of sampling in dynamic scenarios sampling when dealing with complex objects and new challenges arising from big data This book represents a timely collection of state of the art research of sampling techniques suitable for anyone who wants to become more familiar with these helpful techniques for tackling the big data challenge M Emre Celebi Ph D Professor and Chair Department of Computer Science University of Central Arkansas In science the difficulty is not to have ideas but it is to make them work From Carlo Rovelli Proceedings of the Thirty-first Annual ACM Symposium on Theory of Computing ,1999 **SIAM Journal on Computing** Society for Industrial and Applied Mathematics,2006 **Proceedings of the Seventh Canadian Conference on Computational Geometry** ,1995
