Choices Alfonso Salinas, 2018-01-12 This title was first published in 2003 This book assumes a viewpoint practically absent from contemporary economics and readdresses the first fundamental question of economics how should we decide how scarce resources should be allocated among competing uses By focusing on this question the book necessarily reconstitutes the link between ethics and economics Thus the book deals with a crucial topic the moral assessment of the market

mechanism as a tool for allocating scarce resources The key tenet of the book is that the market achieves ends that transcends itself ends that must remain the prerogative of civil society Questions of the foundations of moral philosophy are considered allocating scarce resources is shown to be an exclusively human capacity which means that the market is unable to determine such issues endogenously An intuitionist approach to moral philosophy is developed and this is placed in the context of the history of western moral philosophy The argument encompasses mathematical logic philosophy of mind moral philosophy and economics This key book will appeal to anyone interested in Economics and Ethics and the role of the state
