Probabilistic Modelling:

The Craft of Probabilistic Modelling J. Gani, 2012-12-06 This book brings together the personal accounts and reflections of nineteen mathematical model builders whose specialty is probabilistic modelling. The reader may well wonder why apart from personal interest one should commission and edit such a collection of articles. There are of course many reasons but perhaps the three most relevant are i a philosophical interest in conceptual models this is an interest shared by everyone who has ever puzzled over the relationship between thought and reality ii a conviction not unsupported by empirical evidence that probabilistic modelling has an important contribution to make to scientific research and finally iii a curiosity historical in its nature about the complex interplay between personal events and the development of a field of mathematical research namely applied probability. Let me discuss each of these in turn. Philosophical Abstraction the formation of concepts and the construction of conceptual models present us with complex philosophical problems which date back to Democritus, Plato and Aristotle. We have all at one time or another wondered just how we think are our thoughts concepts and models of reality approximations to the truth or are they simply functional constructs helping us to master our environment. Nowhere are these problems more apparent than in mathematical modelling where idealized concepts and constructions replace the imperfect realities for which they stand.

An Introduction to Probabilistic Modeling Pierre Bremaud, 1988-08 Introduction to the basic concepts of probability theory independence expectation convergence in law and almost sure convergence. Short expositions of more advanced topics such as Markov Chains Stochastic Processes Bayesian Decision Theory and Information Theory.

Philosophy of Probability and Statistical Modelling Mauricio Suárez, 2021-01-21 This Element has two main aims. The first one sections 1-7 is an historically informed review of the philosophy of probability. It describes recent historiography, lays out the distinction between subjective and objective notions and concludes by applying the historical lessons to the main interpretations of probability. The second aim sections 8-13 focuses entirely on objective probability and advances a number of novel theses regarding its role in scientific practice. A distinction is drawn between traditional attempts to interpret chance and a novel methodological study of its application. A radical form of pluralism is then introduced advocating a tripartite distinction between propensities probabilities and frequencies. Finally a distinction is drawn between two different applications of chance in statistical modelling which it is argued vindicates the overall methodological approach. The ensuing conception of objective probability in practice is the complex nexus of chance.

Scalable and Efficient Probabilistic Topic Model Inference for Textual Data Mats Magnusson, 2018-04-27 Probabilistic topic models have proven to be an extremely versatile class of mixed membership models for discovering the thematic structure of text collections. There are many possible applications covering a broad range of areas of study technology natural science social science and the humanities. In this thesis a new efficient parallel Markov Chain Monte Carlo inference algorithm is proposed for Bayesian inference in large topic models. The proposed methods scale well with the corpus size and can be used for other probabilistic topic models.

and other natural language processing applications The proposed methods are fast efficient scalable and will converge to the true posterior distribution In addition in this thesis a supervised topic model for high dimensional text classification is also proposed with emphasis on interpretable document prediction using the horseshoe shrinkage prior in supervised topic models Finally we develop a model and inference algorithm that can model agenda and framing of political speeches over time with a priori defined topics We apply the approach to analyze the evolution of immigration discourse in the Swedish parliament by combining theory from political science and communication science with a probabilistic topic model

Analysis Ming-Ying Leung,1989 Machine Learning Methods Hang Li,2023-12-06 This book provides a comprehensive

and systematic introduction to the principal machine learning methods covering both supervised and unsupervised learning methods. It discusses essential methods of classification and regression in supervised learning such as decision trees, perceptrons, support vector machines, maximum entropy models, logistic regression models, and multiclass classification, as well as methods applied in supervised learning like the hidden Markov model and conditional random fields. In the context of unsupervised learning, it examines clustering and other problems as well as methods such as singular value decomposition, principal component analysis, and latent semantic analysis. As a fundamental book on machine learning, it addresses the needs of researchers and students who apply machine learning as an important tool in their research, especially those in fields such as information retrieval, natural language processing, and text data mining. In order to understand the concepts and methods discussed, readers are expected to have an elementary knowledge of advanced mathematics, linear algebra, and probability statistics. The detailed explanations of basic principles, underlying concepts, and algorithms enable readers to grasp basic techniques, while the rigorous mathematical derivations and specific examples included offer valuable insights into machine learning.

Probabilistic Modeling in Bioinformatics and Medical Informatics Dirk Husmeier, Richard Dybowski, 2005-02. Written for researchers and students in statistics, machine learning, and the biological sciences. This book provides a self-contained introduction to the methodology of Bayesian networks. It offers both elementary tutorials as well as more advanced applications and case studies.

Statistical Modelling Peter G. M. Heijden, 1992. The wide selection of articles in this volume reflects the large variety of problems that are likely to confront an applied statistician. These range from methodological topics such as issues in probability theory and statistical inference, computational statistics, and software considerations to topics arising from particular applications such as data analyses in medicine and epidemiology, sociology, demography, economics, and so on. Particular emphasis is given to the analysis of categorical data and educational testing applications.

Probabilistic Models for Mid-level Vision Xiaofeng Ren, 2006. *A Probabilistic Model for Predicting the Duration of Levels of Electromagnetic Transmission in Falling Snow* Rosemary M. Dyer, 1984. The increasing use of short wavelengths in systems required to operate in all weather conditions under battlefield environments requires that a commander in the field be able to predict the performance of these systems in the short term. A particular problem is the performance of millimeter and micrometer wavelengths in falling snow. This report presents a predictive model based on the assumption that the transmission, like the snowfall intensity, behaves as a Markov chain. The model was developed from data acquired during the SNOW ONE A field program and was tested for a hypothetical weapon system operating in the 8-12 micrometer band. The agreement of theory with measurements is excellent, but the model requires further testing on actual systems.
