Probability Theory And Mathematical Statistics Lecture Notes In Mathematics Vol 1299:

Soliton Equations and their Algebro-Geometric Solutions: Volume 1, (1+1)-Dimensional Continuous Models

Fritz Gesztesy, Helge Holden, 2003-06-05 The focus of this book is on algebro geometric solutions of completely integrable nonlinear partial differential equations in 1+1 dimensions also known as soliton equations Explicitly treated integrable models include the KdV AKNS sine Gordon and Camassa Holm hierarchies as well as the classical massive Thirring system An extensive treatment of the class of algebro geometric solutions in the stationary as well as time dependent contexts is provided The formalism presented includes trace formulas Dubrovin type initial value problems Baker Akhiezer functions and theta function representations of all relevant quantities involved The book uses techniques from the theory of differential equations spectral analysis and elements of algebraic geometry most notably the theory of compact Riemann surfaces The presentation is rigorous detailed and self contained with ample background material provided in various appendices Detailed notes for each chapter together with an exhaustive bibliography enhance the presentation offered in the main text

Sturm-Liouville Operators, Their Spectral Theory, and Some Applications

Fritz Gesztesy, Roger Nichols, Maxim Zinchenko, 2024-09-24 This book provides a detailed treatment of the various facets of modern Sturm Liouville theory including such topics as Weyl Titchmarsh theory classical renormalized and perturbative oscillation theory boundary data maps traces and determinants for Sturm Liouville operators strongly singular Sturm Liouville differential operators generalized boundary values and Sturm Liouville operators with distributional coefficients To illustrate the theory the book develops an array of examples from Floquet theory to short range scattering theory higher order KdV trace relations elliptic and algebro geometric finite gap potentials reflectionless potentials and the Sodin Yuditskii class as well as a detailed collection of singular examples such as the Bessel generalized Bessel and Jacobi operators A set of appendices contains background on the basics of linear operators and spectral theory in Hilbert spaces Schatten von Neumann classes of compact operators self adjoint extensions of symmetric operators including the Friedrichs and Krein von Neumann extensions boundary triplets for ODEs Krein type resolvent formulas sesquilinear forms Nevanlinna Herglotz functions and Bessel functions

Numerical Approximation of Ordinary Differential Problems

Raffaele D'Ambrosio, 2023-09-26 This book is focused on the numerical discretization of ordinary differential equations ODEs under several perspectives The attention is first conveyed to providing accurate numerical solutions of deterministic problems Then the presentation moves to a more modern vision of numerical approximation oriented to reproducing qualitative properties of the continuous problem along the discretized dynamics over long times The book finally performs some steps in the direction of stochastic differential equations SDEs with the intention of offering useful tools to generalize the techniques introduced for the numerical approximation of ODEs to the stochastic case as well as of presenting numerical issues natively introduced for SDEs The book is the result of an intense teaching experience as well as of the research carried out in the last decade by the author It

is both intended for students and instructors for the students this book is comprehensive and rather self contained for the instructors there is material for one or more monographic courses on ODEs and related topics In this respect the book can be followed in its designed path and includes motivational aspects historical background examples and a software programs implemented in Matlab that can be useful for the laboratory part of a course on numerical ODEs SDEs The book also contains the portraits of several pioneers in the numerical discretization of differential problems useful to provide a framework to understand their contributes in the presented fields Last but not least rigor joins readability in the book **Journal of**

Mathematical and Physical Sciences ,1989 *Geometric Aspects of Functional Analysis* Joram Lindenstrauss,Vitali D. Milman,2006-11-14 The scope of the Israel seminar in geometric aspects of functional analysis during the academic year 89 90 was particularly wide covering topics as diverse as Dynamical systems Quantum chaos Convex sets in R^n Harmonic analysis and Banach space theory The large majority of the papers are original research papers *Journal of Statistical Planning and Inference* North-Holland Publishing Company,1997 **International mathematical news** ,1989

Feldtheoretische Beschreibung der Thermodynamik für Grenzflächen Adolf Grauel,1989-09-06 Es wird eine Nichtgleichgewichts Thermodynamik fA1 4r fIA1 4ssigkeitsmischungen in Grenzschichten und Grenzflächen im Rahmen einer feldtheoretischen Beschreibung methodisch entwicke **Sūgaku Expositions** ,1998 **Journal of Mathematical Sciences, the University of Tokyo** ,2006 **An Introduction to Riemann Surfaces, Algebraic Curves and Moduli Spaces** Martin Schlichenmaier,1989-01-11 This lecture is intended as an introduction to the mathematical concepts of algebraic and analytic geometry It is addressed primarily to theoretical physicists in particular those working in string theories The author gives a very clear exposition of the main theorems introducing the necessary concepts by lucid examples and shows how to work with the methods of algebraic geometry As an example he presents the Krichever Novikov construction of algebras of Virasoro type The book will be welcomed by many researchers as an overview of an important branch of mathematics a collection of useful formulae and an excellent guide to the more extensive mathematical literature

Quantum Probability — Quantum Logic Itamar Pitowsky,1989-01-16 This book compares various approaches to the interpretation of quantum mechanics in particular those which are related to the key words the Copenhagen interpretation the antirealist view quantum logic and hidden variable theory Using the concept of correlation carefully analyzed in the context of classical probability and in quantum theory the author provides a framework to compare these approaches He also develops an extension of probability theory to construct a local hidden variable theory The book should be of interest for physicists and philosophers of science interested in the foundations of quantum theory **Bulletin - Institute of Mathematical Statistics** Institute of Mathematical Statistics,1989 **New Methods and Results in Non-linear Field Equations** Philippe Blanchard,1989 *Localizability and Space in Quantum Physics* Henri Bacry,1988 This book discusses in detail the concept of light quanta photons and presents a historical survey of the ideas involved It analyses critically the

principles of complementarity and correspondence as well as the quantization procedure The work of Wigner Newton and Wightman on localized states is discussed The author presents many new ideas and gives a new way of defining the position operator He invites physicists to look in new directions and aims to convince the reader that light quanta are not compatible with our present concept of space in quantum physics The book should be of interest to students as well as to researchers in modern physics and should revive the discussion of the foundations of modern physics Gravitational Lenses James M. Moran, Jacqueline N. Hewitt, Kwok Yung Lo, 1989 *Quantum Groups* Heinz Dietrich Doebner, 1990 A thorough analysis of exactly soluble models in nonlinear classical systems and in quantum systems as well as recent studies in conformal quantum field theory have revealed the structure of quantum groups to be an interesting and rich framework for mathematical and physical problems In this book for the first time authors from different schools review in an intelligible way the various competing approaches inverse scattering methods 2 dimensional statistical models Yang Baxter algebras the Bethe ansatz conformal quantum field theory representations braid group statistics noncommutative geometry and harmonic analysis

PDEs and Continuum Models of Phase Transitions M. Rascle, 1989 In three well organized sections this book offers the first detailed survey of dispersion compensating fibers The sections outline Conventional Dispersion Compensating Fiber including a chapter on modeling dispersion in optical fibers Alternative and Emerging Technologies including control of dispersion in photonic crystal fibers and Systems experiments and Impacts featuring a survey of systems experiments demonstrating Dispersion Compensation Technologies **Complex Differential Geometry and Supermanifolds in Strings and Fields** Petrus J.M. Bongaarts, R. Martini, 1988-10-12 This volume deals with one of the most active fields of research in mathematical physics the use of geometric and topological methods in field theory The emphasis in these proceedings is on complex differential geometry in particular on Kähler manifolds supermanifolds and graded manifolds From the point of view of physics the main topics were field theory string theory and problems from elementary particle theory involving supersymmetry The lectures show a remarkable unity of approach and are considerably related to each other They should be of great value to researchers and graduate students BL Lac Objects Laura Maraschi, Tommaso Maccacaro, Marie-Helene Ulrich, 1989-09-06 This volume gives a comprehensible survey of BL Lac objects contributors summarize observations on these interesting astrophysical objects and present theoretical models to explain them Understanding these objects should help to give a better insight into the physics of black holes and relativistic plasmas Topics addressed cover radio jets expanding at superluminal velocities possible effects of relativistic jets on interstellar matter the continuum emission over the whole electromagnetic system and its variability and the impact of these observations on gravitational lensing and cosmological evolution The book should be immensely useful for graduate students
