Problem Solving One On One:

One-on-One Tutoring by Humans and Computers Martha Evens, Joel Michael, 2006-08-15 One on One Tutoring by Humans and Computers articulates the CIRCSIM Tutor project an attempt to develop a computer tutor that generates a natural language dialogue with a student Editors Martha Evens and Joel Michael present the educational context within which the project was launched as well as research into tutoring the process of implementation of CIRCSIM Tutor and the results of using CIRCSIM Tutor in the classroom The domain of this project is cardiovascular physiology specifically targeting first year medical students though the idea is applicable to the development of intelligent tutoring systems across populations disciplines and domains This 5 year long project was motivated by the belief that students need assistance in building appropriate mental models of complex physiological phenomena as well as practice in expressing these ideas in their own words to fully develop those models and experience in problem solving to use those models effectively The book outlines directions for future research and includes distinct features such as detailed studies of human one on one tutoring learning outcomes resulting from use of the tutor natural language input parsed and translated into logical form and natural language output generated using the LFG paradigm This volume will appeal to educators who want to improve human tutoring or use computer tutors in the classroom and it will interest computer scientists who want to build those computer tutors as well as anyone who believes that language is central to teaching and learning Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical

designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation **180 Days of Problem Solving for Fourth Grade** Chuck Aracich,2016-10-03 The 180 Days of Problem Solving for Grade 4 offers daily problem solving practice geared towards developing the critical thinking skills needed to approach complex problems This teacher friendly resource provides thematic units that connect to a standards based skill that fourth grade students are expected to know to advance to the next level Lesson plans offer guidance and support for every day of the week outlining strategies and activities that dig deeper than routine word problems Each week students will use visual representations and analyze different types of word problems including non routine multi step higher thinking problems This comprehensive resource builds critical thinking skills and connects to national and state standards **Powerless to Powerful** Charles Salina,Suzann Girtz,Joanie Eppinga,2015-12-08 The pressure is on Throughout the country educators and administrators are working hard to make sure students pass standardized tests and graduate At the same time teachers are overwhelmed by ever increasing demands Efforts at reforming schools often replicate the same approaches and net the same discouraging results Staff at many schools feel defensive and powerless as a result of being unable to meet standards they didn t set and don t know how to achieve This book describes a humanistic approach to implementing programs and systems that bring academic press social support and relational trust together in unique ways Based on the understanding that old beliefs are changed by supporting new behaviors the approach includes acquiring and using data in innovative and intentional ways Properly conducted the approach results in high morale a sense of inclusiveness and success increased efficacy and improved metrics in all areas of education The book includes the research and theory behind the approach action steps for leaders and lessons learned in the process useful elements of success for any school **Computing and Intelligent Systems** Yanwen Wu,2011-09-06 This six volume set CCIS 231 232 233 234 235 236 constitutes the refereed proceedings of the International Conference on Computing Information and Control ICCIC 2011 held in Wuhan China in September 2011 The papers are organized in two volumes on Innovative Computing and Information CCIS 231 and 232 two volumes on Computing and Intelligent Systems CCIS 233 and 234 and in two volumes on Information and Management Engineering CCIS 235 and 236 The school edition.
