Administrators and faculty in medical nursing and health science programs are witnessing a substantial increase in the number of students with disabilities entering their programs. Concurrently the benefits of diversity in healthcare are becoming increasingly apparent and important. Provider-patient concordance is a known mechanism for reducing health care disparities. By developing a workforce that mirrors the patient population we can appropriately inform disability care, reducing health care disparities while embracing the tenets of the Americans With Disabilities Act (ADA), namely equal opportunity, full participation, independent living, and economic self-sufficiency for qualified individuals with disabilities. One in five individuals will experience disability at some point in their lives, making this the largest minority in the US. A commitment to disability inclusion for qualified students should be a high-level goal of nursing, medical, and other health science programs. To support this goal, leaders in these areas must develop robust programs and an understanding of the best practices for inclusion. This first of its kind title is designed to help deans, program directors, faculty, student affairs personnel, and disability resource professionals thoughtfully plan for the growing population of health care professionals with disabilities. The content helps stakeholders contextualize disability inclusion in health care education as a function of social justice and a mechanism of reducing health care disparities for patients. It offers pragmatic advice grounded in research, best practice, and case law to address the highly nuanced approach to determining and implementing accommodations in a high-stakes clinical environment. *Disability as Diversity* connects the moving parts necessary to ensure equal access for qualified students and provides a blueprint for crafting policy, proactive messaging, improving climate, adhering to accreditation standards, addressing licensing and board exams, responding to student failure, all while remaining compliant with the Americans with Disabilities Act (ADA) and applicable Federal regulations. This text provides educators with the perspectives and skills they need to bring disability inclusion to the forefront of health education.

Teaching Epidemiology Jorn Olsen, Rodolfo Saracci, Dimitrios Trichopoulos, 2010-06-25. Teaching epidemiology requires skill and knowledge combined with a clear teaching strategy and good pedagogic skills. The general advice is simple: if you are not an expert on a topic, try to enrich your background knowledge before you start teaching. *Teaching Epidemiology* third edition helps you to do this and, by providing the world expert teacher's advice on how best to structure teaching, gives a unique insight into what has worked in their hands. The book will help you plan your own tailored teaching program. The book is a guide to new teachers in the field at two levels: those teaching basic courses for undergraduates and those teaching more advanced courses for students at postgraduate level. Each chapter provides key concepts and a list of key references. Subject-specific methodology and disease

specific issues from cancer to genetic epidemiology are dealt with in details There is also a focused chapter on the principles and practice of computer assisted learning *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), Current Catalog National Library of Medicine (U.S.),1970 First multi year cumulation covers six years 1965 70
