**functions** Konrad Knopp, 1952      *An Investigation of the Laws of Thought* George Boole, 1854      Revival: Philosophy and  
the Physicists (1937) Lizzie Susan Stebbing, 2018-05-08 This book is written by a philosopher for other philosophers and for  
that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books  
written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to  
criticize physical theories not to decide what precisely are their implications We are dependent upon the scientists for an  
exposition of those developments which so we find them proclaiming have important and far reaching consequences for  
philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read  
in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been  
considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should  
have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that  
they have put forth and to criticize the grounds upon which these views are based      **Hyperbolic Functional Differential**  
**Inequalities and Applications** Z. Kamont, 2012-12-06 This book is intended as a self contained exposition of hyperbolic  
functional differential inequalities and their applications Its aim is to give a systematic and unified presentation of recent  
developments of the following problems i functional differential inequalities generated by initial and mixed problems ii  
existence theory of local and global solutions iii functional integral equations generated by hyperbolic equations iv numerical  
method of lines for hyperbolic problems v difference methods for initial and initial boundary value problems Beside classical  
solutions the following classes of weak solutions are treated Cauchy solutions for quasilinear equations entropy  
solutions and viscosity solutions for nonlinear problems and solutions in the Friedrichs sense for almost linear equations The  
theory of difference and differential difference equations generated by original problems is discussed and its applications to  
the constructions of numerical methods for functional differential problems are presented The monograph is intended for  
different groups of scientists Pure mathematicians and graduate students will find an advanced theory of functional  
differential problems Applied mathematicians and research engineers will find numerical algorithms for many hyperbolic  
problems The classical theory of partial differential inequalities has been described extensively in the monographs 138 140  
195 225 As is well known they found applications in differential problems The basic examples of such questions are  
estimates of solutions of partial equations estimates of the domain of the existence of solutions criteria of uniqueness and  
estimates of the error of approximate solutions      **The Continuum and other types of serial order** E.V. Huntington,

**Pseudosolution of Linear Functional Equations** Alexander S. Mechenov,2005-07-25 In the book there are introduced models and methods of construction of pseudo solutions for the well posed and ill posed linear functional equations circumscribing models passive active and complicated experiments Two types of the functional equations are considered systems of the linear algebraic equations and linear integral equations Methods of construction of pseudosolutions are developed in the presence of passive right hand side errors for two types of operator errors passive measurements and active representation errors of the operator and all their combinations For the determined and stochastic models of passive experiments the method of the least distances of construction of pseudosolutions is created the maximum likelihood method of construction of pseudosolutions is applied for active experiments and then methods for combinations of models of regression of passive and of active experiments are created We have constructed regularized variants of these methods for systems of the linear algebraic equations with the degenerated matrices and for linear integral equations of the first kind In pure mathematics the solution techniques of the functional equations with exact input data more often are studied In applied mathematics problem consists in construction of pseudosolutions that is solution of the functional equations with perturbed input data Such problem in many cases is incomparably more complicated The book is devoted to a problem of construction of a pseudosolution the problem of a parameter estimation in the following fundamental sections of applied mathematics confluent models passive active and the every possible mixed experiments      **Problem Book in the Theory of Functions:**
