## **Problems In Mathematical Physics:**

Boundary Value Problems of Mathematical Physics Ivar Stakgold, 2000-06-30 For more than 30 years this two volume set has helped prepare graduate students to use partial differential equations and integral equations to handle significant problems arising in applied mathematics engineering and the physical sciences Originally published in 1967 this graduate level introduction is devoted to the mathematics needed for the modern approach to boundary value problems using Green's functions and using eigenvalue expansions Now a part of SIAM's Classics series these volumes contain a large number of concrete interesting examples of boundary value problems for partial differential equations that cover a variety of applications that are still relevant today For example there is substantial treatment of the Helmholtz equation and scattering theory subjects that play a central role in contemporary inverse problems in acoustics and electromagnetic theory

*Methods for Solving Mathematical Physics Problems* Valerii Ivanovich Agoshkov, P. B. Dubovski, V. P. Shutiaev, 2006 The aim of the book is to present to a wide range of readers students postgraduates scientists engineers etc basic information on one of the directions of mathematics methods for solving mathematical physics problems The authors have tried to select for the book methods that have become classical and generally accepted However some of the current versions of these methods may be missing from the book because they require special knowledge The book is of the handbook teaching type On the one hand the book describes the main definitions the concepts of the examined methods and approaches used in them and also the results and claims obtained in every specific case On the other hand proofs of the majority of these results are not presented and they are given only in the simplest methodological cases Another special feature of the book is the inclusion of many examples of application of the methods for solving specific mathematical physics problems of applied nature used in various areas of science and social activity such as power engineering environmental protection hydrodynamics elasticity theory etc This should provide additional information on possible applications of these methods To provide complete information the book includes a chapter dealing with the main problems of mathematical physics together with the results obtained in functional analysis and boundary value theory for equations with partial derivatives A Collection of Problems

Vladimirov, 2013-11-09 The extensive application of modern mathematical techniques to theoretical and mathematical physics requires a fresh approach to the course of equations of mathematical physics This is especially true with regards to such a fundamental concept as the solution of a boundary value problem The concept of a generalized solution considerably broadens the field of problems and enables solving from a unified position the most interesting problems that cannot be solved by applying classical methods To this end two new courses have been written at the Department of Higher Mathematics at the Moscow Physics and Technology Institute namely Equations of Mathematical Physics by V S Vladimirov and Partial Differential Equations by V P Mikhailov both books have been translated into English by Mir Publishers the first in 1984 and the second in 1978 The present collection of problems is based on these courses and amplifies them considerably Besides the classical boundary value problems we have included a large number of boundary value problems that have only generalized solutions Solution of these requires using the methods and results of various branches of modern analysis For this reason we have included problems in Lebesgue integration problems involving function spaces especially spaces of generalized differentiable functions and generalized functions with Fourier and Laplace transforms and integral equations      **Boundary Value Problems of Mathematical Physics** Ivar Stakgold, 1972      **A Collection of Problems on Mathematical Physics** B. M. Budak, A. A. Samarskii, A. N. Tikhonov, 2013-10-22 A Collection of Problems on Mathematical Physics is a translation from the Russian and deals with problems and equations of mathematical physics The book contains problems and solutions The book discusses problems on the derivation of equations and boundary condition These Problems are arranged on the type and reduction to canonical form of equations in two or more independent variables The equations of hyperbolic type concerns derive from problems on vibrations of continuous media and on electromagnetic oscillations The book considers the statement and solutions of boundary value problems pertaining to equations of parabolic types when the physical processes are described by functions of two three or four independent variables such as spatial coordinates or time The book then discusses dynamic problems pertaining to the mechanics of continuous media and problems on electrodynamics The text also discusses hyperbolic and elliptic types of equations The book is intended for students in advanced mathematics and physics as well as for engineers and workers in research institutions
