

SEMANTICS

Semantics is the branch of linguistics that deals with studying meaning in language. It examines the meaning of words, phrases, sentences, and language.

OVERVIEW

Semantics looks at literal and implied meanings, the connotations words may carry, and how these meanings can change across different contexts. It also studies the relationships between words and phrases, like synonymy (words with the same or similar meanings), antonymy (words with opposite meanings), and polysemy (words or phrases with multiple, related meanings).

EXAMPLE

Interpreting Irony: Irony refers to when someone says one thing but means another, often conveying implied criticism or sarcasm. For example, if someone says, "What a great day!" while standing in pouring rain, this would be ironic because it implies disappointment with the current situation despite saying otherwise through their words.

Problems Of Semantics:

Problems of Semantics L. Tondl, 2012-12-06 Ladislav Tondl's insightful investigations into the language of the sciences bear directly upon some decisive points of confrontation in modern philosophy of science and of language itself. In the decade since his *Scientific Procedures* was published in English (Boston Studies 11), Dr Tondl has enlarged his original monograph of 1966 on the promise, problems, and achievements of modern semantics; the main topic of his later work has been semantic information theory. A Russian translation considerably expanded as a second edition was published in 1975 (Moscow: Progress Publishers) with an appreciative critical commentary in the form of a conclusion by Professor Avenir I. Uemov of Odessa. Indeed, many Soviet studies in the problems of the semantics of science show the same sort of philosophical curiosity about the relationship of meanings in scientific language to procedures in scientific epistemology that characterizes Tondl's work as in the work of Mirislav Popovich (Kiev) and Vadim Sadovsky (Moscow) and their colleagues. But we know that interest in these matters is world-wide, ranging from such classical topics as sense and denotation, empiricist reduction, vagueness, and denotational opacity to the new and equally exciting topics of the semantics of non-unique preference choices, the nuances of informational synonymy, and the semantics of a picture shape, so briefly but beautifully sketched in Tondl's dense and promising last chapter. We are pleased to have had Tondl's kind cooperation in producing this English edition, actually a third edition of his research about semantics. **Problems of Semantics**, 1981* **Problems of Semantics**

Troncy, Benoit Huet, Simon Schenk, 2011-07-18 In this book the authors present the latest research results in the multimedia and semantic web communities bridging the Semantic Gap. This book explains, collects, and reports on the latest research results that aim at narrowing the so-called multimedia Semantic Gap: the large disparity between descriptions of multimedia content that can be computed automatically and the richness and subjectivity of semantics in user queries and human interpretations of audiovisual media. Addressing the grand challenge posed by the Semantic Gap requires a multi-disciplinary approach: computer science, computer vision, and signal processing, cognitive science, web science, etc., and this is reflected in recent research in this area. In addition, the book targets an interdisciplinary community and, in particular, the Multimedia and the Semantic Web communities. Finally, the authors provide both the fundamental knowledge and the latest state-of-the-art results from both communities with the goal of making the knowledge of one community available to the other. **Key Features:** Presents state-of-the-art research results in multimedia semantics, multimedia analysis, metadata standards, and multimedia knowledge representation; semantic interaction with multimedia; Contains real industrial problems exemplified by user case scenarios; Offers an insight into various standardisation bodies including W3C, IPTC, and ISO/MPEG; Contains contributions from academic and industrial communities from Europe, USA, and Asia; Includes an accompanying website containing user

cases datasets and software mentioned in the book as well as links to the K Space NoE and the SMaRT society web sites <http://www.multimediasemantics.com> This book will be a valuable reference for academic and industry researchers practitioners in multimedia computational intelligence and computer science fields Graduate students project leaders and consultants will also find this book of interest

Trends in Romance Linguistics and Philology Rebecca Posner,John N. Green,1980 **International Geographic Information Systems (IGIS) Symposium: Overview of research needs and the research agenda** ,1988 The Role of Religion in Modern Societies Detlef Pollack,Daniel V. A. Olson,2008 Does modernization lead to the decline of religion This question lies at the centre of a key debate in the sociology of religion During the past decade American scholars using primarily American data have dominated this debate and have made a strong case that the answer to this question is no Recently however a new crop of European scholars working with new sources of European data have uncovered evidence that points toward an affirmative answer This volume pays special attention to these trends and developments to provide the reader with a more well rounded understanding of the many ways in which religion interacts with modernization Respected scholars such as David Voas Steve Bruce and Anthony Gill examine modern societies across the world in this splendid book which will interest sociologists political scientists historians and theologians in equal measure **To Mean — To Understand** Hans Hörmann,1981-06-01 It is not uncommon in science that following a period of turbulent growth a skeptical mood builds up and doubts begin to be expressed as to the rationale of progress achieved and the extent to which the position reached coincides with the original goals This kind of discomfort is felt today by linguists and their close companions the psycholinguists Despite its growing intensity this discomfort is not readily verbalizable Still we will try to characterize it tentatively with a few angry assertions each of which taken separately is perhaps untenable in its extreme form but which together convey a sense of the malaise that seems to afflict the area in question For one thing the models and theories current in linguistics tend to approach a level of complexity at which extreme sophistication borders on folly Further the present inflation of macro and microsystems testifies to the growing arbitrariness of theorizing in spite of the abundance of publications specifying the criteria by which to evaluate these systems against a meta theory of science thus we are made aware of the widening gulf between linguistic theory and the realities of language **Journal of Semantics** ,1986
