Advances in Spatial Data Handling Sabine Timpf, Patrick Laube, 2012-11-02 This volume is based on the reviewed and edited proceedings of the International Symposium on Spatial Data Handling 2012 held in Bonn The 15th SDH brought together scholars and professionals from the international GIScience community to present the latest research achievements and to share experiences in Geospatial dynamics geosimulation and exploratory visualization

Handbook of Computational Geometry J.R. Sack, J. Urrutia, 1999-12-13 Computational Geometry is an area that provides solutions to geometric problems which arise in applications including Geographic Information Systems Robotics and Computer Graphics This Handbook provides an overview of key concepts and results in Computational Geometry It may serve as a reference and study guide to the field Not only the most advanced methods or solutions are described but also many alternate ways of looking at problems and how to solve them

Developments in Spatial Data Handling Peter F. Fisher, 2006-02-28 The International Symposium on Spatial Data Handling SDH commenced in 1984 in Zurich Switzerland organized by the International Geographical Union Commission on Geographical Data Sensing and Processing which was later succeeded by the Commission on Geographic Information Systems Study Group on Geographical Information Science and then the Commission on Geographical Information Science <http://www.hku.hk/cupem/igugisc> Previous symposia have been held at the following locations 1st Zurich 1984 6th Edinburgh 1994 2nd Seattle 1986 7th Delft 1996 3rd Sydney 1988 8th Vancouver 1998 4th Zurich 1990 9th Beijing 2000 5th Charleston 1992 10th Ottawa 2002 th This book is the proceedings of the 11 International Symposium on Spatial Data Handling The conference was held in Leicester United Kingdom on August 23 to 25 2004 as a satellite meeting to the Congress of the International Geographical Union in Glasgow The International Symposium on Spatial Data Handling is a refereed conference All the papers in this book were submitted as full papers and reviewed by at least two members of the Programme Committee 83 papers in all were submitted

and among the 50 included here all are considered above average by the reviewers The papers cover the span of Geographical Information Science topics which have always been the concern of the conference Topics from uncertainty error vagueness and ontology and semantics to web issues digital elevation models and urban infrastructure

Geo-Topology Fivos Papadimitriou, 2024-01-05 Geo Topology is an exploration of the depth and breadth of the relationships between Geography and Topology with applications ranging from Landscape Geography to Social Geography and from Spatial Analysis to Geospatial Technologies It shows how topics of geographical research landscapes borders spatial social relationships etc can be examined by using mathematical concepts and methods of Topology exposing the realm of geo topological modelling and visualization through Point Set Topology Knot Theory Reeb graphs Topological Surfaces i.e. Möbius bands and Klein bottles Differential Topology Network Analysis Combinatorial Topology Braid Theory and Ultrametric Topology Besides geographers this book is a trove of new ideas for landscape ecologists mathematicians data scientists sociologists psychologists anthropologists and educators Geo Topology is a systematic introduction to topological thinking in Geography also by highlighting the significance of Topology for Geographical Education as well as for the Philosophy and Epistemology of Geography Approaches to Scaling of Trace Gas Fluxes in Ecosystems A.F. Bouwman, 1999-02-23 This excellent book covers techniques used for extrapolating measurements of trace gas fluxes and factors regulating the production consumption and exchange of trace gases in terrestrial and aquatic environments It provides a comprehensive summary of all aspects of scaling from flux measurement techniques geographic data modelling use of tracers and isotopes inverse modelling and satellite borne atmospheric observations An interesting feature of the book is the fact that both fluxes from terrestrial and aquatic marine sources are discussed along with the uncertainties in estimates of trace gas fluxes at different scales including point field landscape regional and global scale As well as reviewing the state of the art in the field of scaling of fluxes of greenhouse gases ozone and aerosol and their precursors and acidifying compounds the emphasis of this volume is on identification of gaps in knowledge finding solutions and determination of future research directions
