Grid Computing Fran Berman,Geoffrey Fox,Anthony J. G. Hey,2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons 1 Its ability to make more cost effective use of a given amount of computer resources 2 As a way to solve problems that can t be approached without an enormous amount of computing power 3 Because it suggests that the resources of many

computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective. A number of corporations, professional groups, university consortiums, and other groups have developed or are developing frameworks and software for managing grid computing projects. The European Community (EU) is sponsoring a project for a grid for high energy physics, earth observation, and biology applications. In the United States, the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people. Sun Microsystems offers Grid Engine software. Described as a distributed resource management tool, Grid Engine allows engineers at companies like Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time. The Grid is a very hot topic generating broad interest from research and industry. e.g. IBM Platform Avaki, Entropia, Sun, HP. Grid architecture enables very popular e-Science projects like the Genome project, which demand global interaction and networking. In recent surveys, over 50% of Chief Information Officers are expected to use Grid technology this year.

Grid Computing Features: contributions from the major players in the field. Covers all aspects of grid technology from motivation to applications. Provides an extensive state of the art guide in grid computing. This is essential reading for researchers in Computing and Engineering, physicists, statisticians, engineers, and mathematicians, and IT policy makers.

Proceedings, 2004 Proceedings International Conference on Distributed Computing Systems, 2000 *Solutions to Parallel and Distributed Computing Problems* Albert Y. Zomaya, Fikret Ercal, Stephan Olariu, 2000-11-14. Solving problems in parallel and distributed computing through the use of bioinspired techniques. Recent years have seen a surge of interest in computational methods patterned after natural phenomena with biologically inspired techniques such as fuzzy logic, neural networks, simulated annealing, genetic algorithms, or evolutionary computer models increasingly being harnessed for problem solving in parallel and distributed computing.

Solutions to Parallel and Distributed Computing Problems presents a comprehensive review of the state of the art in the field, providing researchers and practitioners with critical information on the use of bio-inspired techniques for improving software and hardware design in high performance computing. Through contributions from top leaders in the field, this important book brings together current research results exploring some of the most intriguing and cutting edge topics from the world of biocomputing, including Parallel and distributed computing of cellular automata and evolutionary algorithms. How the speedup of bio-inspired algorithms will help their applicability in a wide range of problems. Solving problems in parallel simulation through such techniques as simulated annealing algorithms and genetic algorithms. Techniques for solving scheduling and load balancing problems in parallel and distributed computers. Applying neural networks for problem solving in wireless communication systems.
