# Geologic Remote Sensing

---

The papers in this issue of *Remote Sensing of Environment* are based on presentations given at the ERIIM Tenth Thematic Conference on Geologic Remote Sensing, held in San Antonio, Texas on May 9–12, 1994. Of twenty-three manuscripts submitted for consideration, eight papers were chosen for publication following peer and editorial reviews.

These papers represent the diverse uses of remote sensing data and the sources of data available today. The sequence of papers will lead the reader through: (1) engineering and land use applications, needs that are immediate for proper planning of the world's infrastructure; (2) more traditional geological applications of remote sensing, such as mineral and hydrogeological exploration and geological mapping; and (3) the burgeoning field of radar technology and applications. The rapidly expanding use of remote sensing information as input to geographic information systems (GIS) is apparent in several of the papers.

Remote sensing technology is on the threshold of several significant developmental events: availability of

higher resolution data acquired using devices from satellites to field instruments, reduction of the cost of computers fast enough to handle massive amounts of data, and development of spatial and spectral analysis methods (e.g., GIS and neural networks) capable of effectively assisting in the reduction of complex remote sensing data sets. Combination of these developments can be expected to open up the field of remote sensing to general use and untapped markets, including regional and municipal planners, business (including sales and marketing), and even knowledgeable individuals. Indeed, the direction of the discipline of remote sensing is rapidly changing to broaden significantly beyond the largely research uses of the recent past to include many more real-world applications.

The papers in this issue clearly demonstrate that remote sensing technology has not been stagnant. It is capable of providing important tools to aid us in understanding and managing our world.
