Proceedings of the ... ASME Design Engineering Technical Conferences, 2003 Knowledge Intensive Computer Aided Design Susan Finger, Tetsuo Tomiyama, Martti Mäntylä, 2013-03-09 Computer Aided Design CAD technology plays a key role in today's advanced manufacturing environment To reduce the time to market achieve zero defect quality the at first production and use available production and logistics resources effectively product and design process knowledge covering the whole product life cycle must be used throughout product design Once generated this intensive design knowledge should be made available to later life cycle activities Due to the increasing concern about global environmental issues and rapidly changing economical situation worldwide design must exhibit high performance not only in quality and productivity but also in life cycle issues including extended producer's liability This requires designers and engineers to use various kinds of design knowledge intensively during product design and to generate design information for use in later stages of the product life cycle such as production distribution operation maintenance reclamation and recycling Therefore future CAD systems must incorporate product and design process knowledge which is not explicitly dealt with in the current systems in their design tools and design object models

Design of Sustainable Product Life Cycles Jörg Niemann,Serge Tichkiewitch,Engelbert Westkämper,2008-09-27 Life cycle design is understood as to develop to plan to calculate to define to draw a holistic concept for the entire life cycle of a product Life cycle design means a one time planning during the concept phase of a product in which the pathway of a product over the entire life cycle is determined So e g the planning of possible services for a product during its utilization phase the way of material recycling how and which parts can be reused how the logistics for recycling will be organised or how the product can be used afterwards So it is a conceptual pre design of all later activities over the life cycle By this understanding the book delivers a really holistic approach because before a product is physically made a life long concept and utilization scenarios with closed material and information cycles have to be developed This promotes a real thinking in product life cycles The book addresses professionals as well as researchers and students in the field of product life cycle management Different methods in the field of product design operation and recycling will be presented and finally merge to an integrated method of product life cycle design Readers will benefit from the holistic approach which enables them to design successful products by the implementation of closed loop product life cycles
