Modellbasierter Ansatz zur automatisierten Gestaltung von Montagevorrichtungen Ruben Förstmann, 2019-12-11

Produzierende Unternehmen stehen zunehmend vor der Herausforderung Produkte in immer kürzeren Zyklen auf den Markt zu bringen Damit einher geht die Notwendigkeit die Produktionsprozesse parallel zur Produktentwicklung zu qualifizieren

und abzusichern Aus den diversen Schnittstellen zwischen diesen beiden Bereichen erwachsen Verzögerungsrisiken im Anlauf wenn z.B. Betriebsmittel in einer späten Anlaufphase durch eine Änderung der Produktgestalt noch einmal angepasst werden müssen Bekannte Lösungsansätze in diesem Zusammenhang fallen in den Forschungsbereich Computer Aided Fixture Design Eine Analyse der einschlägigen Literatur zeigt dass sich dabei vorrangig mit der automatisierten Herleitung von Spannplänen für Bohr- und Fräsvorrichtungen befasst wird und durchgängig automatisierte Ansätze bislang nicht im Fokus standen bzw. an Aspekten wie der Modellierung und Optimierung von Werkstoffsteifigkeiten scheitern Vor diesem Hintergrund erfolgt im vorliegenden Werk eine Fokussierung auf Montagevorrichtungen um anhand dieser Betriebsmittelgruppe mit reduziertem Anforderungsprofil eine Grundlage für eine durchgängige Automatisierung der Gestaltungsprozesse zu legen Dafür wird ein hybrider Ansatz vorgestellt der zum einen aus einem automatisierbaren Gestaltungsmodell und zum anderen aus einem Aufbauprinzip besteht das Baukastenelemente sowie additiv gefertigte Elemente berücksichtigt Das zentrale Gestaltungsmodell besteht dabei aus den blicklichen Funktions- und Spannmodellen und darüber hinaus aus einem Referenzboxmodell das der Grobstrukturierung der Vorrichtung dient Dazu besteht dieses Modell aus Bauraumvorhalten die einerseits Vorrichtungsbaulemente und andererseits Funktionsräume aus dem Montageprozess in dem die Vorrichtung eingesetzt werden soll repräsentieren Nach Verkettung der Modelle im Hauptteil des Werks erfolgt eine Detaillierung in Form von Modulen und Submodulen sodass eine Verfeinerung des Ansatzes in Algorithmen ermöglicht wird Im Rahmen der Erarbeitung erfolgte die Verfeinerung in einen MatLab Demonstrator der genutzt wird um die Ansätze im letzten Abschnitt des Werks an einem Fallbeispiel aus einer automobilen Kleinserienmontage zu validieren

Modeling and Analysis for Optimal Scheduling of Biodiesel Batch-Plants Mohamad Fauzan Amir, 2011 Generally scheduling problems accompanying typical batch processes are vitally important to be solved for improving the plant productivity In these respects finding a good and feasible schedule or even an optimal result by which costs and lead times can be reduced is often a very complex and also a difficult task Moreover in large plants the challenges come not only from the modeling ways that require systematic and structured approaches but also from the exact strategies how the performance of the model can be analyzed The goal of this research is to develop a comprehensive study on industrial sized plants with regard modeling and analysis of scheduling problems Formalization of the required plant specifications the modularly modeling ways which refer to the widely used batch standards and also the strategies for tackling complexity are the main contributions of this thesis These studies will be carried out by using the Timed Net Condition Event Systems TNCES model Finally the model is analyzed to synthesize an optimal control strategy for the investigated plants

Simulation in Manufacturing Keith Rathmill, J. Browne, Jimmie Browne, 1988 Discrete Event Simulations Aitor Goti, 2010-08-18 Considered by many authors as a technique for modelling stochastic dynamic and discretely evolving systems this technique has gained widespread acceptance among the practitioners who want to represent and improve complex systems Since DES is a technique applied in

incredibly different areas this book reflects many different points of view about DES thus all authors describe how it is understood and applied within their context of work providing an extensive understanding of what DES is It can be said that the name of the book itself reflects the plurality that these points of view represent The book embraces a number of topics covering theory methods and applications to a wide range of sectors and problem areas that have been categorised into five groups As well as the previously explained variety of points of view concerning DES there is one additional thing to remark about this book its richness when talking about actual data or actual data based analysis When most academic areas are lacking application cases roughly the half part of the chapters included in this book deal with actual problems or at least are based on actual data Thus the editor firmly believes that this book will be interesting for both beginners and practitioners in the area of DES
