**Introduction to Space Syntax in Urban Studies** Akkelies van Nes, Claudia Yamu, 2021-07-31 This open access textbook is a comprehensive introduction to space syntax method and theory for graduate students and researchers It provides a step by step approach for its application in urban planning and design This textbook aims to increase the accessibility of the space syntax method for the first time to all graduate students and researchers who are dealing with the built environment such as those in the field of architecture urban design and planning urban sociology urban geography archaeology road engineering and environmental psychology Taking a didactical approach the authors have structured each chapter to explain key concepts and show practical examples followed by underlying theory and provided exercises to facilitate learning in each chapter The textbook gradually eases the reader into the fundamental concepts and leads them towards complex theories and applications In summary the general competencies gain after reading this book are to understand explain and discuss space syntax as a method and theory be capable of undertaking various space syntax analyses such as axial analysis segment analysis point depth analysis or visibility analysis be able to apply space syntax for urban research and design practice be able to interpret and evaluate space syntax analysis results and embed these in a wider context be capable of producing new original work using space syntax This holistic textbook functions as compulsory literature for spatial analysis courses where space syntax is part of the methods taught Likewise this space syntax book is useful for graduate students and researchers who want to do self study Furthermore the book provides readers with the fundamental knowledge to understand and critically reflect on existing literature using space syntax

**The Mathematics of Urban Morphology** Luca D'Acci, 2019-03-23 This edited volume provides an essential resource for urban morphology the study of urban forms and structures offering a much needed mathematical perspective Experts on a variety of mathematical modeling techniques provide new insights into specific aspects of the field such as street networks sustainability and urban growth The chapters collected here make a clear case for the importance of tools and methods to understand model and simulate the formation and evolution of cities The chapters cover a wide variety of topics in urban morphology and are conveniently organized by their mathematical principles The first part covers fractals and focuses on how self similar structures sort themselves out through competition This is followed by a section on cellular automata and includes chapters exploring how they generate fractal forms Networks are the focus of the third part which includes street networks and other forms as well Chapters that examine complexity and its relation to urban structures are in part four The fifth part introduces a variety of other quantitative models that can be used to study urban morphology In the book's final section a series of multidisciplinary commentaries offers readers new ways of looking at the relationship between mathematics and urban forms Being the first

book on this topic Mathematics of Urban Morphology will be an invaluable resource for applied mathematicians and anyone studying urban morphology Additionally anyone who is interested in cities from the angle of economics sociology architecture or geography will also find it useful This book provides a useful perspective on the state of the art with respect to urban morphology in general and mathematics as tools and frames to disentangle the ideas that pervade arguments about form and function in particular There is much to absorb in the pages that follow and there are many pointers to ways in which these ideas can be linked to related theories of cities urban design and urban policy analysis as well as new movements such as the role of computation in cities and the idea of the smart city Much food for thought Read on digest enjoy From the foreword by Michael Batty     The Virtual and the Real in Planning and Urban Design Claudia Yamu, Alenka Poplin, Oswald Devisch, Gert De Roo, 2017-10-12 The Virtual and the Real in Planning and Urban Design Perspectives Practices and Applications explores the merging relationship between physical and virtual spaces in planning and urban design Technological advances such as smart sensors interactive screens locative media and evolving computation software have impacted the ways in which people experience explore interact with and create these complex spaces This book draws together a broad range of interdisciplinary researchers in areas such as architecture urban design spatial planning geoinformation science computer science and psychology to introduce the theories models opportunities and uncertainties involved in the interplay between virtual and physical spaces Using a wide range of international contributors from the UK USA Germany France Switzerland Netherlands and Japan it provides a framework for assessing how new technology alters our perception of physical space

*Urbanization and Affordances that Promote Well-Being for (Urban) People and for a Healthy Biosphere* Stephan Barthel, Marketta Kyttä, 2020-01-30 The world is urbanizing at an unprecedented rate It is estimated that in the near future urban landscapes for another ca 2.7 billion people will be built on planet Earth approximately converting land equivalent to the size of South Africa Such land conversion coupled with citizen densification increasing inequalities shifting diets and emerging technologies challenge human well being and pose ever increasing demand for resources generated by the Biosphere This Research Topic concentrates on the various ways urbanization can promote individual well being mental physical and social health as well as ecological health a healthy Biosphere What kind of affordances for human health promotion can urbanization include What kinds of affordances for a psychological connection with nature can urbanization include What kinds of nudges for pro environmental behavior and consumption decreasing detrimental consumption behaviors can be actively designed in urban settings The Research Topic at hand uses a transactional approach where an affordance can be understood as a non deterministic in situ precondition for a human activity enabled by relations between abilities of an individual with features of an environment We encourage a broad definition of the concept of affordances where the environment must not be restricted to the material biophysical environment alone but also could be combined with social immaterial features We see that the transactional approach of this Research Topic posits that meaning arises in

relations between humans and their environment that it will be equally applicable to natural and designed environments and that it doesn't regard dichotomies like city contra nature or social contra ecological. Hence this Research Topic is interested in if the transactional approach can be used as a conceptual tool not only for promotion of mental physical and social health in cities but simultaneously for unraveling relations at the micro scale in cities which can be used for solutions that also promote a healthy Biosphere.

Environment and Planning, 2008. *An Empirical Approach to the Experience of Architectural Space* Gerald Franz, 2006. quantified in generic dimensions additionally an experimental method is required that provides for reproducible and valid empirical data. Here in particular caveats and chances when using virtual reality VR technology for architectural simulation are discussed. The following chapter reviews the current state of theories and research on affective responses to architecture. Subsequently four empirical studies are presented that test the previously conceptualized methodological framework and explore emotional influences of various basic architectural design aspects. Three alternative approaches for the quantitative description of architecture are developed either based on image processing lists of architectural elements or Space Syntax methods. Finally the issue of potential interactions between different design aspects is discussed and empirically tested leading to a plausible framework model for the integration of individual factors. Taken together a viable approach to the experience of architectural space is outlined promising novel insights into the emotional meaning of architecture.

**Inequality, Wealth, and Market Exchange in the Maya Lowlands** Els Barnard, 2021. This volume examines the economic system of the Classic Maya Lowlands center of Uxul Campeche a secondary center under the political influence of Calakmul. A household based approach is used to review the urban economic system in which these households played a central role. Multiple lines of evidence are combined here using both quantitative and qualitative methods to study economic inequality settlement organization social integration power structures consumption production and exchange at the site. The results suggest that the economy of Uxul was largely based on market exchange and although wealth inequality was high people along the socio economic spectrum had significant economic agency comparable quality of life and economic mobility was possible. This study shows that the implementation of a multifaceted household based approach allows for a more complete understanding of the complex economy of an ancient urban center.
