Languages and Compilers for Parallel Computing Henry Gordon Dietz, 2003-08-03 This book constitutes the thoroughly refereed post proceedings of the 14th International Workshop on Languages and Compilers for Parallel Computing LCPC 2001 held in Lexington KY USA in August 1 3 2001 The 28 revised full papers presented were carefully selected during two rounds of reviewing and improvement All current issues in parallel processing are addressed in particular compiler optimization HP Java programming power aware parallel architectures high performance applications power management of mobile computers data distribution shared memory systems load balancing garbage collection parallel components job scheduling dynamic parallelization cache optimization specification and dataflow analysis **Tools and Algorithms for the Construction and Analysis of Systems** Ed Brinksma, 1995 This book presents 12 revised refereed papers selected as the best from 32 submissions for the First International Workshop on Tools and Algorithms for the Construction and Analysis of Systems TACAS 95 held in Aarhus Denmark in May 1995 The workshop brought together 46 researchers interested in the development and application of tools and algorithms for specification verification analysis and construction of distributed systems The papers included in the book are devoted to refinement based and compositional verification construction techniques analysis and verification via theorem proving process algebras temporal and modal logics techniques for real time hybrid and probabilistic systems and value passing systems **Engineering a Compiler** Keith D. Cooper, Linda Torczon, 2004 Today s compiler writer must choose a path through a design space that is filled with diverse alternatives Engineering a Compiler explores this design space by presenting some of the ways these problems have been solved and the constraints that made each of those solutions attractive *Advanced Debugging Methods* Raimondas Lencevicius, 2012-09-07 Object relationships in modern software systems are becoming increasingly numerous and complex and program errors due to violations of object relationships are difficult to detect Programmers need new tools that allow them to explore objects in a large system more efficiently and to detect broken object relationships instantaneously Such tools incorporate approaches used in such areas as data visualization pattern matching and extraction database querying active databases and rule based programming The query based debugging approach developed by the author of this book is another powerful yet efficient tool to be added to the developer s tool chest Advanced Debugging Methods presents practice and tools for debugging computer programs This book proposes new powerful approaches that simplify the daunting task of debugging complex software systems Although debugging has been addressed in numerous research papers many of its methods have yet to be explored in a book length format This book helps to fill this gap by presenting an overview of existing debugging tools with motivating examples and case studies as well as presenting new state of the art debugging methods Advanced Debugging Methods will be of use to software developers looking for tools to be applied in cutting edge practice system architects looking at the relationship between software design and debugging tools and programming language

researchers looking for new ideas in run time tool implementation as well as detailed descriptions of advanced implementations and university professors and graduate students who will use this book as supplementary reading for graduate courses in programming tools language implementation and advanced object oriented systems Advanced Debugging Methods is also a handy reference of currently existing debugging methodologies as well as a springboard for cutting edge research to simplify the difficult task of debugging and to facilitate the development of more robust software systems

**Proceedings of the ACM SIGPLAN '92 Conference on Programming Language Design and Implementation**, 1992      **Journal of Programming Languages**, 1996      **Symbolic Analysis Techniques for Effective Automatic Parallelization** William Joseph Blume, University of Illinois at Urbana-Champaign. Department of Computer Science, 1995      [Descriptive Composition of Compiler Components](#) John Tang Boyland, 1996 Abstract New machine architectures and new programming languages are always appearing and thus the need for new compilers continues unabated. Even experimental languages and machines need compilers. Compiler writers developing new and/or experimental compilers face competing pressures when designing their large scale structure. On the one hand a more modular structure will make it easier to maintain, modify or reuse pieces of the compiler. A more modular compiler is more likely to be correct and reusable compiler components lead to consistent semantics among the compilers using them. On the other hand a highly modular structure may lead to inefficiencies in implementation. Suppose one uses an intermediate representation and divides up the compiler into two parts: one which compiles the source to the intermediate representation and another which translates a program in the intermediate representation to the target machine language. Doing so may make the compiler easier to understand and furthermore a well chosen intermediate representation may prove a suitable target for other source languages or a suitable source for translating to other machines. On the other hand the need to create and then traverse this intermediate representation may slow a compiler significantly. If the two parts are described in a high level declarative formalism, descriptive composition can be used to combine the two parts automatically so as to avoid creating and traversing the intermediate structure. This dissertation presents a declarative compiler description language APS and a new method for

descriptive composition The language based on a variant of attribute grammars contains a number of features that aid compiler writers in factoring descriptions so that each concept can be expressed separately Both a compiler for Oberon2 and a front end for APS itself have been written in APS The back end of the Oberon2 compiler consists of a translation to a form of the GCC tree intermediate representation Another module gives the translation from this form to source level C text A prototype compiler has been developed for APS that supports descriptive composition The descriptively composed version of the Oberon2 back end with the translation to C text is no larger than the sum of the sizes of the modules from which it is composed yet it runs almost twice as fast The Oberon2 compiler is the first successful use of descriptive composition for a realistically complex system and demonstrates the effectiveness of combining the new APS description language and the new algorithm for descriptive composition presented in this dissertation ACM Letters on Programming Languages and Systems, 1992 ACM Transactions on Software Engineering and Methodology, 2001 **Computing Systems**, 1995 **Relational Profiling in Multithreaded Virtual Machines** Timothy Hume Heil, 2002 Congressus Numerantium, 1994 **Computer Sciences Technical Report**, 1999 **IBM Journal of Research and Development**, 2004 Hardware/software Mechanisms for Increasing Resource Utilization on VLIW/EPIC Processors Mikhail Smelyanskiy, 2004 High-level Synthesis of VLSI Designs for Scientific Programs Minjoong Rim, 1993
