Foliations: Geometry And Dynamics - Proceedings Of The Euroworkshop Lawrence Conlon, Remi Langevin, Takashi Tsuboi, Paweł Walczak, 2002-02-01 This volume contains surveys and research articles regarding different aspects of the theory of foliation The main aspects concern the topology of foliations of low dimensional manifolds the geometry of foliated Riemannian manifolds and the dynamical properties of foliations Among the surveys are lecture notes devoted to the analysis of some operator algebras on foliated manifolds and the theory of confoliations objects defined recently by W Thurston and Y Eliashberg situated between foliations and contact structures Among the research articles one can find a detailed proof of an unpublished theorem due to Duminy concerning ends of leaves in exceptional minimal sets Foliations II Alberto

Candel, Lawrence Conlon, 2000 This is the second of two volumes on foliations the first is Volume 23 of this series In this volume three specialized topics are treated analysis on foliated spaces characteristic classes of foliations and foliated three manifolds Each of these topics represents deep interaction between foliation theory and another highly developed area of mathematics In each case the goal is to provide students and other interested people with a substantial introduction to the topic leading to further study using the extensive available literature Hilbert C\*-modules Vladimir Markovich

Manuilov, Evgenii Vadimovich Troitskiĭ, Based on lectures delivered by the authors at Moscow State University this volume presents a detailed introduction to the theory of Hilbert C modules Hilbert C modules provide a natural generalization of Hilbert spaces arising when the field of scalars  $\mathbb{C}$  is replaced by an arbitrary C algebra The general theory of Hilbert C modules appeared more than 30 years ago in the pioneering papers of W Paschke and M Rieffel and has proved to be a powerful tool in operator algebras theory index theory of elliptic operators K and KK theory and in noncommutative geometry as a whole Alongside these applications the theory of Hilbert C modules is interesting on its own In this book the authors explain in detail the basic notions and results of the theory and provide a number of important examples Some results related to the authors research interests are also included A large part of the book is devoted to structural results self duality reflexivity and to nonadjointable operators Most of the book can be read with only a basic knowledge of functional analysis however some experience in the theory of operator algebras makes reading easier **Polonica zagraniczne**, 2006
