Proceedings Of The Fifth West Coast Conference On Formal Linguistics:

    Situation Theory and Its Applications: Volume 3 Robin Cooper,Peter Aczel,Kuniaki Mukai,John Perry,1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried   Proceedings of the ... West Coast Conference on Formal Linguistics ,2008   Situation Theory and Its Applications: Volume 1 Robin Cooper,Kuniaki Mukai,John Perry,Center for the Study of Language and Information (U.S.),1990 Situation Theory grew out of attempts by Jon Barwise in the late 1970s to provide a semantics for naked infinitive perceptual reports such as Claire saw Jon run Barwise s intuition was that Claire didn t just see Jon an individual but Jon doing something a situation Situations are individuals having properties and standing in relations A theory of situations would allow us to study and compare various types of situations or situation like entitles such as facts events and scenes One of the central themes of situation theory of meaning and reference should be set within a general theory of information one moreover that is rich enough to do justice to perception communication and thought By now many people have contributed by the need to give a rigorous mathematical account of the principles of information that underwrite the theory   *Situation Theory and Its Applications: Volume 2* Robin Cooper,Jon Barwise,Kuniaki Mukai,John Perry,1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science AI linguistics logic philosophy and mathematics the theory is forging a common set of tools for the analysis of phenomena from all these fields This volume presents work that evolved out of the Second Conference on Situation Theory and its Applications Twenty six essays exhibit the wide range of the theory covering such topics as natural language semantics philosophical issues about information mathematical applications and the visual representation of information in computer systems Jon Barwise is a professor of philosophy mathematics and logic at Indiana University in Bloomington Jean Mark Gawron is a researcher at SRI International and a consultant at Hewlett Packard Laboratories Gordon Plotkin is a professor of theoretical computer science at the University of Edinburgh Syun Tutiya is in the philosophy department at Chiba University in Japan   Computational Models of American Speech Mary Margaret Withgott,Francine R. Chen,1993-03 A new perspective on phonetic variation is achieved in this volume through the construction of a series of models of spoken American English In the past computer theorists and programmers investigating pronunciation have often relied on their own knowledge of the language or on limited transcription data Speech recognition researchers on the other hand have drawn on a great deal of data but without examining in detail the information about

pronunciation the data contains The authors combine the best of each approach to develop probabilistic and rule based computational models of transcription data An ongoing controversy in studies of phonetic variation is the existence and proper definition of a phonetic unit The authors argue that assumptions about the units of spoken language are critical to a computational model Their computational models employ suprasegmental elements such as syllable boundaries stress and position in a unit called a metrical foot The use of such elements in modeling data enables the creation of better computational models for both recognition and synthesis technology This book should be of interest to speech engineers linguists and anyone who wishes to understand symbolic systems of communication **Literature and Cognition** Jerry R. Hobbs,1990-09-30 Cognitive science with its guiding metaphor of the mind as a computer has made substantial progress towards an understanding of how people comprehend and produce discourse The essays in this book apply these insights to problems in the interpretation of literature The first two chapters present the outline of a cognitive theory of discourse and use it to shed light on some classic issues in literary theory including the roles of the author s intention and the reader s brief systems in the meaning of a literary work The next three chapters are more technical investigations of discourse interpretation metaphor and discourse coherence The framework developed is then used in the examination of two literary works a sonnet by Milton and the novella Sylvie by G rard de Nerval **The Linguistics of Punctuation** Geoffrey Nunberg,1990-09 Geoffrey Nunberg challenges a widespread assumption that the linguistic structure of written languages is qualitatively identical to that of spoken language It should no longer be necessary to defend the view that written language is truly language but it is surprising to learn of written language category indicators that are realized by punctuation marks and other figural devices He shows that traditional approaches to these devices tend to describe the features of written language exclusively by analogy to those of spoken language with the result that punctuation has been regarded as an unsystematic and deficient means for presenting spoken language intonation Analysed in its own terms however punctuation manifests a coherent linguistic subsystem of text grammar that coexists in writing with the system of lexical grammar that has been the traditional object of linguistic inquiry A detailed analysis of the category structure of English text sentences reveals a highly systematic set of syntactic and presentational rules that can be described in terms independent of the rules of lexical grammar and are largely matters of the tacit knowledge that writers acquire without formal instruction That these rules obey constraints that are structurally analogous to those of lexical grammar leads Nunberg to label the text grammar an application of the principles of natural language organization to a new domain Geoffrey Nunberg is a researcher at Xerox Palo Alto Research Center Optimality Theory in Phonology John J. McCarthy,2008-04-15 Optimality Theory in Phonology A Reader is a collection of readings on this important new theory by leading figures in the field including a lengthy excerpt from Prince and Smolensky s never before published Optimality Theory Constraint Interaction in Generative Grammar Compiles the most important readings about Optimality Theory in phonology from some of the most prominent researchers in

the field Contains 33 excerpts spanning a range of topics in phonology and including many never before published papers Includes a lengthy excerpt from Prince and Smolensky s foundational 1993 manuscript Optimality Theory Constraint Interaction in Generative Grammar Includes introductory notes and study research questions for each chapter

Handbook of Natural Language Processing Robert Dale,Hermann Moisl,Harold Somers,2000-07-25 This study explores the design and application of natural language text based processing systems based on generative linguistics empirical copus analysis and artificial neural networks It emphasizes the practical tools to accommodate the selected system

Lexical Matters Anna Szabolcsi,Ivan Sag,1992-06 This volume contains new research on the lexicon and its relation to other aspects of linguistics These essays put forth empirical arguments to claim that specific theoretical assumptions concerning the lexicon play a crucial role in resolving problems pertaining to other components of grammar Topics include syntactic semantic interface in the areas of aspect argument structure and thematic roles lexicon based accounts of quirky case anaphora and control the boundary between the lexicon and syntax in the domains of sentence comprehension and nominal compounding and the possibility of extending the concept of blocking beyond the traditional lexicon Ivan Sag is a professor of linguistics at Stanford University Anna Szabolcsi is an associate professor of linglustics at UCLA *Proceedings of the West Coast Conference on Formal Linguistics* Mary Dalrymple,Jeffery Goldberg,Kristin Hanson,Michael Inman,1986-01

Proceedings of the Thirty-Fifth Annual Meeting of the North East Linguistic Society Leah Bateman,Cherlon Ussery,2006-04 The 35th annual meeting of the North East Linguistic Society was held at the University of Connecticut Storrs on October 22 24 2004 The proceedings collect submitted papers by invited speakers main session and poster presenters and alternates from the conference **Practical Reasoning and Acceptance in a Context** Michael Bratman,1991 *Planning and the Stability of Intention* Michael Bratman,1991 Proceedings of NELS. North Eastern Linguistic Society. Meeting,1987 **Language and Learning for Robots** Colleen Crangle,Patrick Suppes,1994 This book develops the notion of an instructable robot one which derives its intelligence in part from interaction with humans Since verbal interaction with a robot requires a natural language semantics the authors propose a natural model semantics which they then apply to the interpretation of robot commands **Report** ,1991 **Fodor and Psychological Explanations** John Perry,David J.
