Reliability, Survivability and Quality of Large Scale Telecommunication Systems Peter Stavroulakis, 2003-09-11

Competition within the telecommunications companies is growing fiercer by the day. Therefore it is vital to ensure a high level of quality and reliability within all telecommunications systems in order to guard against faults and the failure of components and network services. Within large scale systems such quality and reliability problems are ever higher. The metrics of Quality and Reliability have to date only been available in journals and technical reports of companies which have designed or produced major parts of systems used in large applications. This book provides a self contained treatment enabling the reader to be able to produce, define and utilise the metrics of Quality and Reliability required for the design and implementation of a large application such as a world class event as the Olympic Games. An additional outcome is that this book can be used as a guide for producing an ISO standard for large scale Systems such as the Olympic Games. Provides presentations of techniques used for solving quality and reliability problems in telecommunications networks replete with illustrations of their applications to real world services and world class events. Individual chapters written by respective international experts within their fields. This will prove highly informative for Practising engineers, researchers and telecommunications professionals, academics and graduate students in telecommunications standards bodies and organisations such as ISO.
