Model-based Fault Diagnosis in Dynamic Systems Using Identification Techniques Silvio Simani, Cesare Fantuzzi, Ron J. Patton, 2013-11-11 Safety in industrial process and production plants is a concern of rising importance but because the control devices which are now exploited to improve the performance of industrial processes include both sophisticated digital system design techniques and complex hardware there is a higher probability of failure Control systems must include automatic supervision of closed loop operation to detect and isolate malfunctions quickly A promising method for solving this problem is analytical redundancy in which residual signals are obtained and an accurate model of the system mimics real process behaviour If a fault occurs the residual signal is used to diagnose and isolate the malfunction This book focuses on model identification oriented to the analytical approach of fault diagnosis and identification covering choice of model structure parameter identification residual generation and fault diagnosis and isolation Sample case studies are used to demonstrate the application of these techniques Sicherheitsbeurteilung historischer Steinbogenbrücken Dirk Proske, 2006 **Journal of Dynamic Systems, Measurement, and Control** ,2004 Publishes theoretical and applied original papers in dynamic systems Theoretical papers present new theoretical developments and knowledge for controls of dynamical systems together with clear engineering motivation for the new theory Applied papers include modeling simulation and corroboration of theory with emphasis on demonstrated practicality **Proceedings** IEEE Control Systems Society, 1993 *International Aerospace Abstracts* ,1990 The Cumulative Book Index ,1996 A world list of books in the English language **SIAM Journal on Control and Optimization** Society for Industrial and Applied Mathematics, 2008
