High Energy Physics 99 Proceedings of the International Europhysics Conference on High Energy Physics, Tampere, Finland, 15-21 July 1999 K Huitu, H Kurki-Suonio, J Maalampi, 2000-01-01 High Energy Physics 99 contains the 18 invited plenary presentations and 250 contributions to parallel sessions presented at the International Europhysics Conference on High Energy Physics The book provides a comprehensive survey of the latest developments in high energy physics Topics discussed include hard high energy structure functions soft interactions heavy flavor the standard model hadron spectroscopy neutrino masses particle astrophysics field theory and detector development Qcd: Perturbative Or Nonperturbative? - Proceedings Of The Xvii Autumn School Lidia S Ferreira, Paulo Nogueira, Joaquim I

Silva-marcos, 2000-11-24 This volume presents a selection of current developments in quantum chromodynamics with some emphasis on the borderline between the perturbative and the nonperturbative regime The topics include effective QCD sum rules vacuum structure confinement bound states quark masses lattice QCD deconfinement deep inelastic scattering and structure functions strong coupling constant radiative corrections **Cosmological Implications of Quantum Anomalies** Neil David Barrie, 2018-07-21 The successes of the standard models of particle physics and cosmology are many but have proven incapable of explaining all the phenomena that we observe This book investigates the potentially important role of quantum physics particularly quantum anomalies in various aspects of modern cosmology such as inflation the dynamical generation of the visible and dark matter in the universe and gravitational waves By doing so the authors demonstrate that exploring the links between cosmology and particle physics is key to helping solve the mysteries of our Universe

Microwave Background: Theory and Observations Norma G. Sánchez,Yuri N. Parijskij,2012-12-06 The goal of the Daniel Chalonge School on Astrofundamental Physics is to contribute to a theory of the universe and particularly of the early universe up to the marks and at the scientific height of the unprecedented accuracy existent and expected in the observational data The impressive development of modern cosmology during the last decades is to a large extent due to its unification with elementary particle physics and quantum field theory The cross section between these fields has been increasing setting up Astrofundamental Physics The early universe is an exceptional theoretical and experimental laboratory in this new discipline This NATO Advanced Study Institute provided an up dated understanding from a fundamental physics and deep point of view of the progress and key issues in the early universe and the cosmic microwave background theory and observations The genuine interplay with large scale structure formation and dark matter problem were discussed The central focus was placed on the cosmic microwave background Emphasis was given to the precise inter relation between fundamental physics and cosmology in these problems both at the theoretical and experimental observational levels within a deep and well defined programme which provided in addition a careful interdisciplinarity Special sessions were devoted to high energy cosmic rays neutrinos in astrophysics and high energy astrophysics Deep understanding clarification synthesis careful interdisciplinarity within a fundamental physics framework were the main goals of the course *Quark--Gluon Plasma 3* Rudolph C. Hwa,Xin-Nian Wan,2004 Annotation Text reviews the major topics in Quark Gluon Plasma including the QCD phase diagram the transition temperature equation of state heavy quark free energies and thermal modifications of hadron properties Includes index references and appendix For researchers and practitioners *Particles and Fields* ,2002

Strong and Electroweak Matter '98 Jan Ambjørn,1999 Already in 1997 the topics included in this meeting had been enlarged to include all different phases and phase transitions relevant on laboratory scales or in cosmology The 98 meeting followed this trend and there was a balanced combination of the physics associated with both strong and electroweak interactions and beyond The main motivation continues to be the understanding of the standard model in extreme situations particularly relevant on the cosmological scale Most contributions were in one way or another concerned with the finite temperature aspects of strong and electroweak interactions and as in the previous meeting one persistent theme was the present understanding of baryon number asymmetry how it can be created and how it can be maintained beyond the earliest stages of the Universe The recent progress in describing the real time and nonequilibrium dynamics of the non Abelian gauge was covered in a number of the main talks as well as in several shorter contributions and posters The conference presented examples of impressive analytical progress and equally impressive results from numerical simulations the two techniques continue to fruitfully complement each other One completely new theme at this conference was the recent suggestion that

finite density QCD may contain new and interesting condensed phases in the neighborhood of the conventional critical density separating quark matter from hadronic matter All of these developments and many more are reflected in this book
