The next generation of these applications will be based on software agents to which increasingly complex tasks can be delegated and which interact with each other in sophisticated ways so as to forge agreements in the interest of their human users. The wide variety of technologies supporting this vision is the subject of this volume. It summarises the European Cooperation in Science and Technology COST Action project on Agreement Technologies AT during which approximately 200 researchers from 25 European countries along with eight institutions from non COST countries cooperated as part of a number of working groups. The book is the first to provide a comprehensive overview of the emerging field of Agreement Technologies, written and coordinated by the leading researchers in the field. The results set out here are due for wide dissemination beyond the computer technology sector involving law and social science as well. **Proceedings of the First International Joint Conference on Autonomous Agents and Multiagent Systems** Maria Gini, 2002 *Agentenbasierte Produktionssteuerung komplexer Produktionssysteme* Lars Mönch, 2007-12-20 Lars Mönch arbeitet Anforderungen an moderne Produktionssteuerungssysteme für komplexe Produktionssysteme heraus und entwickelt ein neuartiges Rahmenwerk, das aus Steuerungsverfahren und Softwareagenten zur rechnerischen

Dynamics and Management of Reasoning Processes John-Jules Ch. Meyer, Jan Treur, 2013-04-17 This volume the 6th volume in the DRUMS Handbook series is part of the after math of the successful ESPRIT project DRUMS Defeasible Reasoning and Uncertainty Management Systems which took place in two stages from 1989 1996 In the second stage 1993 1996 a work package was introduced devoted to the topics Reasoning and Dynamics covering both the topics of Dynamics of Reasoning where reasoning is viewed as a process and Reasoning about Dynamics which must be understood as pertaining to how both designers of and agents within dynamic systems may reason about these systems The present volume presents

work done in this context This work has an emphasis on modelling and formal techniques in the investigation of the topic Reasoning and Dynamics but it is not mere theory that occupied us Rather research was aimed at bridging the gap between theory and practice Therefore also real life applications of the modelling techniques were considered and we hope this also shows in this volume which is focused on the dynamics of reasoning processes In order to give the book a broader perspective we have invited a number of well known researchers outside the project but working on similar topics to contribute as well We have very pleasant recollections of the project with its lively workshops and other meetings with the many sites and researchers involved both within and outside our own work package **AI Magazine** ,2003
