Proceedings of the Nineteenth European Marine Biology Symposium P. E. Gibbs, 1985-10-24 These edited proceedings first published in 1985 provide a thematic review of four important areas of marine biology The theme of the first part of the volume is production at boundary systems and in particular it deals with rates of production and related processes at boundary systems including shelf breaks thermoclines and the fronts between stratified and mixed waters and the contribution of the production of such systems to the overall productivity of a region The second part look sat the dynamics of deep sea life new techniques of and results from direct observation in situ experimentation and sampling especially those concerning rates and processes in the deep sea The third part examines concepts of community organisation in the benthos theoretical and empirical studies that synthesise the structural and functional properties of benthic communities The final section on adaptive relevance of variability in biochemical and physiological processes with particular emphasis on relationships between population genetics and physiological and biochemical ecology

Coastal Ecosystem Processes Daniel M. Alongi, 2020-11-25 Coastal Ecosystem Processes written by the renowned marine scientist Daniel Alongi describes how pelagic and benthic food webs from beaches and tidal flats to the continental edge process energy and matter This volume focuses on recent advances and new developments on how food webs are closely intertwined with the geology chemistry and physics of coastal seas Dr Alongi presents a process functional approach as a way of understanding how the energetics of coastal ecosystems rely not only on exchanges within and between food chains but how such functions are influenced by terrigenous and atmospheric processes There is a need for documentation and an awareness of just how necessary yet delicate is the interplay of biological and physical forces between coastal ocean land and the atmosphere Marine scientists today need to make informed management decisions about sustainable development and conservation of these fragile ecosystems Coastal Ecosystem Processes provides present and future marine scientists the latest coastal ecosystem information to make the right decisions concerning the ecology of our oceans
