**Regelungstechnik** Karl H. Fasol, Klaus Diekmann, 2013-03-08 Die Simulation wird in der Regelungstechnik zum Entwurf von Regelkreisen zur Prozessüberwachung sowie zur regelungstechnischen Ausbildung genutzt Anhand von Simulationen können theoretisch oder experimentell ermittelte Modelle entworfen und getestet werden das gesamte Regelkreisverhalten kann optimiert werden Die verschiedenen Simulationstechniken werden gegenübergestellt so dass jeweils die günstigste Wahl bezüglich des einzusetzenden Simulationswerkzeugs bzw verfahrens getroffen werden kann System Identification R. Isermann, 2014-05-23 System Identification is a special section of the International Federation of Automatic Control IFAC Journal Automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification Topics include modeling and identification step response and frequency response methods correlation methods

least squares parameter estimation and maximum likelihood and prediction error methods After analyzing the basic ideas concerning the parameter estimation methods the book elaborates on the asymptotic properties of these methods and then investigates the application of the methods to particular model structures The text then discusses the practical aspects of process identification which includes the usual general procedures for process identification selection of input signals and sampling time offline and on line identification comparison of parameter estimation methods data filtering model order testing and model verification Computer program packages are also discussed This compilation of tutorial papers aims to introduce the newcomers and non specialists in this field to some of the basic methods and procedures used for system identification

Continuous Manufacturing of Pharmaceuticals Peter Kleinebudde, Johannes Khinast, Jukka Rantanen, 2017-07-14 A comprehensive look at existing technologies and processes for continuous manufacturing of pharmaceuticals As rising costs outpace new drug development the

pharmaceutical industry has come under intense pressure to improve the efficiency of its manufacturing processes. Continuous process manufacturing provides a proven solution. Among its many benefits are minimized waste, energy consumption, and raw material use; the accelerated introduction of new drugs; the use of smaller production facilities with lower building and capital costs; the ability to monitor drug quality on a continuous basis; and enhanced process reliability and flexibility. Continuous Manufacturing of Pharmaceuticals prepares professionals to take advantage of that exciting new approach to improving drug manufacturing efficiency. This book covers key aspects of the continuous manufacturing of pharmaceuticals. The first part provides an overview of key chemical engineering principles and the current regulatory environment. The second covers existing technologies for manufacturing both small molecule based products and protein peptide products. The following section is devoted to process analytical tools for continuously operating manufacturing environments. The final two sections treat the integration of several individual parts of processing into fully operating continuous process systems and summarize state of art approaches for innovative new manufacturing principles. Brings together the essential know how for anyone working in drug manufacturing as well as chemical, food, and pharmaceutical scientists working on continuous processing. Covers chemical engineering principles, regulatory aspects, primary and secondary manufacturing process, analytical technology, and quality by design. Contains contributions from researchers in leading pharmaceutical companies, the FDA, and academic institutions. Offers an extremely well informed look at the most promising future approaches to continuous manufacturing of innovative pharmaceutical products. Timely, comprehensive, and authoritative. Continuous Manufacturing of Pharmaceuticals is an important professional resource for researchers in industry and academe working in the fields of pharmaceuticals development and manufacturing.
