Bundestag, 2010 Facing Global Environmental Change Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czeslaw Mesjasz, Heinz Krummenacher, 2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth sessment Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on c mate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world Handbook of Bioenergy Economics and Policy Madhu Khanna, Jürgen Scheffran, David Zilberman, 2009-12-02 Concerns about energy security uncertainty about oil prices declining oil reserves and global climate change are fueling a shift towards bioenergy as a renewable alternative to fossil fuels Public policies and private investments around the globe are aiming to increase local capacity to produce biofuels A key constraint to the expansion of biofuel production is the limited amount of land available to meet the needs for fuel feed and food in the coming decades Large scale biofuel production raises concerns about food versus fuel tradeoffs about demands for natural resources such as water and about potential impacts on environmental quality The book is organized into five parts The

introductory part provides a context for the emerging economic and policy challenges related to bioenergy and the motivations for biofuels as an energy source The second part of the handbook includes chapters that examine the implications of expanded production of first generation biofuels for the allocation of land between food and fuel and for food feed prices and trade in biofuels as well as the potential for technology improvements to mitigate the food vs fuel competition for land Chapters in the third part examine the infrastructural and logistical challenges posed by large scale biofuel production and the factors that will influence the location of biorefineries and the mix of feedstocks they use The fourth part includes chapters that examine the environmental implications of biofuels their implications for the design of policies and the unintended environmental consequences of existing biofuel policies The final part presents economic analysis of the market social welfare and distributional effects of biofuel policies

Africa in Contemporary Perspective Manuh, Takyiwaa, Sutherland-Addy, Esi, 2014-05-08 An important feature of Ghanaian tertiary education is the foundational African Studies Programme which was initiated in the early 1960s Unfortunately hardly any readers exist which bring together a body of knowledge on the themes issues and debates which inform and animate research and teaching in African Studies particularly on the African continent This becomes even more important when we consider the need for knowledge on Africa that is not Eurocentric or sensationalised but driven from internal understandings of life and prospects in Africa Dominant representations and perceptions of Africa usually depict a continent in crisis Rather than buying into external representations of Africa with its lacks and aspirations for Western modernities we insist that African scholars in particular should be in the forefront of promoting understanding of the pluri lingual overlapping and dense reality of life and developments on the continent to produce relevant and usable knowledge Continuing and renewed interest in Africa s resources including the land mass economy minerals visual arts and performance cultures as well as bio medical knowledge and products by old and new geopolitical players obliges African scholars to transcend disciplinary boundaries and to work with each other to advance knowledge and uses of those resources in the interests of Africa s people
