### Chapter 1:

- How information systems are transforming business?

- Globalization opportunities:

World is being changed by information systems and as we expect, also businesses are being changed, not only their structure but also the way we should run it. Facts as the emerging mobile digital platforms, possibility of save big data (related with the growth of online software as a service) and the growth in the cloud computing industry where more and more business software runs over internet, help managers and ordinary people in their quotidian. These 3 things are interrelated and have been change at the same time.

Businesses sought to sense and respond to rapidly changing customer demand, reduce inventories to the lowest possible levels (actually, there are many companies that stop having a physical inventory and a physical space, working only on internet), achieving higher levels of operational efficiency. Moreover, supply chains have become more fast-paced, with companies of all sizes depending on just-in-time inventory to reduce their overhead costs and get to market faster. Another positive change is that businesses are starting to use social networking tools to connect their employees, customers and managers worldwide.

So, summarizing, the improvement in the information systems provides many globalization opportunities:

They also used the so-called "Web 2.0" technologies, such as social networking, collaboration tools, and wikis in order to make better, faster decisions. All of these tools make
