**Identifikation dynamischer Systeme** Christian Bohn, Heinz Unbehauen, 2016-12-13 Das Werk vermittelt eine ausführliche und vertiefte Einführung in das Gebiet der Identifikation dynamischer Systeme. Verschiedene Verfahren werden dazu vorgestellt. Ziel bei allen Verfahren ist es, anhand von gemessenen Ein- und Ausgangssignalen eines technischen oder auch nichttechnischen Systems ein mathematisches Modell dieses Systems zu ermitteln, welches das tatsächliche Verhalten möglichst gut beschreibt. Dabei werden Identifikationsverfahren sowohl für lineare und nichtlineare Eingänge als auch Mehrgrundsysteme behandelt. Als Ergebnis erhält man gewöhnlich ein zeitdiskretes Systemmodell. In vielen Fällen ist es jedoch vorteilhafter, die Parameter zeitkontinuierlicher Systemmodelle zu bestimmen, da diese direkte Aussagen über physikalische Eigenschaften des untersuchten Systems ermöglichen. Zahlreiche Beispiele und Anhänge gestatten dem interessierten Leser auch das Selbststudium.

Identification of Continuous-Time Systems Allamaraju Subrahmanyam, Ganti Prasada Rao, 2019-12-06 Models of dynamical systems are required for various purposes in the field of systems and control. The models are handled either in discrete time (DT) or in continuous time (CT). Physical systems give rise to models only in CT because they are based on physical laws which are invariably in CT. In system identification, indirect methods provide DT models which are then converted into CT. Methods of directly identifying CT models are preferred to the indirect methods for various reasons. The direct methods involve a primary stage of signal processing followed by a secondary stage of parameter estimation. In the primary stage, the measured signals are processed by a general linear dynamic operation, computational or realized through prefilters, to preserve the system parameters in their native CT form, and the literature is rich on this aspect. In this book, Identification of Continuous Time Systems: Linear and Robust Parameter Estimation, Allamaraju Subrahmanyam and Ganti Prasada Rao consider CT system models that are linear in their unknown parameters and propose robust methods of estimation. This book complements the existing literature on the identification of CT systems by enhancing the secondary stage through linear and robust estimation. In this book, the authors provide an overview of CT system identification, consider Markov parameter models and time moment models as simple linear in parameters models for CT system identification, bring them into mainstream model parameterization via basis functions, present a methodology to robustify the recursive least squares algorithm for parameter estimation of linear regression models, suggest a simple off-line error quantification scheme to show that it is possible to quantify error even in the absence of informative priors, and indicate some directions for further research. This modest volume is intended to be a useful addition to the literature on identifying CT systems.

Power Electronic Systems Anish Deb, Suchismita Ghosh, 2017-12-19 A Totally Different Outlook on Power Electronic System Analysis

Power Electronic Systems Walsh Analysis with MATLAB builds a case for Walsh analysis as a powerful tool in the study of power electronic systems. It considers the application of Walsh functions in analyzing power electronic systems and the advantages offered by Walsh domain analysis of power electronic systems. Solves Power Electronic Systems in an Unconventional Way. This book successfully integrates power electronics as well as systems and control. Incorporating a complete orthonormal function set very much unlike the sine cosine functions, it introduces a blending between piecewise constant orthogonal functions and power electronic systems. It explores the background and evolution of power electronics and discusses Walsh and related orthogonal basis functions. It develops the mathematical foundation of Walsh analysis and first and second order system analyses by Walsh technique. It also describes the Walsh domain operational method and how it is applied to linear system analysis. Introduces Theories Step by Step. While presenting the underlying principles of Walsh analysis, the authors incorporate many illustrative examples and include a basic introduction to linear algebra and MATLAB programs. They also examine different orthogonal piecewise constant basis functions like Haar, Walsh, slant, block, pulse functions and other related orthogonal functions along with their time scale evolution. Analyzes pulse fed single input single output SISO first and second order systems. Considers stepwise and continuously pulse width modulated chopper systems. Describes a detailed analysis of controlled rectifier circuits. Addresses inverter circuits. Power Electronic Systems Walsh Analysis with MATLAB is written for postgraduate students, researchers and academicians in the area of power electronics as well as systems and control.

**Identification of Continuous-Time Systems** N.K. Sinha, G.P. Rao, 1991-07-31. In view of the importance of system identification, the International Federation of Automatic Control (IFAC) and the International Federation of Operational Research Societies (IFORS) hold symposia on this topic every three years. Interest in continuous time approaches to system identification has been growing in recent years. This is evident from the fact that the number of invited sessions on continuous time systems has increased from one in the 8th number Symposium that was held in Beijing in 1988 to three in the 9th Symposium in Budapest in 1991. It was during the 8th Symposium in August 1988 that the idea of bringing together important results on the topic of Identification of continuous time systems was conceived. Several distinguished colleagues who were with us in Beijing at that time encouraged us by promising on the spot to contribute to a comprehensive volume of collective work. Subsequently we contacted colleagues all over the world known for their work in this area with a formal request to contribute to the proposed volume. The response was prompt and overwhelmingly encouraging. We sincerely thank all the authors for their valuable contributions covering various aspects of identification of continuous time systems.
