## **Prehistoric America An Ecological Perspective:**

*Prehistoric America* Piotr Makowski, 2017-07-12 The cultural parallels between widely separated but environmentally similar regions are often extraordinary yet these parallels are discounted by anthropologists on the basis that they ignore a large mass of less similar data Too often cultural parallels between distant regions have been taken for granted rather than recognized as phenomena that need to be explained The thesis of *Prehistoric America* is that they are neither fortuitous nor inconsequential but an indication of the strength of environmental pressures on cultural development This work is an excellent introduction to the prehistoric cultures of North and South America one that will help the reader to discover and enjoy the intellectual adventure of archeology

**Prehistoric America** Betty Meggers, 2017-07-05 During the past 30 years the relationship between humans and the environment has changed more drastically than during any previous period in human history Local sustainable exploitation of natural resources has been overridden by global interests indifferent to the detrimental impact of their activities on local environments and their inhabitants Increasingly efficient technology has reduced the need for human labor but improved medical treatment favors reproduction and survival creating a growing imbalance between population density and food supply Rapid transportation is introducing alien species to distant terrestrial and aquatic environments where they displace critical elements in the local food chain This succinct and profusely illustrated volume applies evolutionary and cultural theory to the interpretation of prehistoric cultural development in the western hemisphere After reviewing cultural development in Mesoamerica and the central Andes Meggers examines adaptation in North and South American regions with similar environments to evaluate the influence of adaptive constraints on cultural content What made the human species dominant on the planet is the substitution of cultural behavior for biological behavior Prehistoric Americans applied this ability to develop sustainable relationships with their environments Many succeeded and others did not Paleoclimatic reconstructions can be compared with archeological sequences and ethnographic descriptions to identify cultural behavior responsible for the difference Comparison of the responses of Amazonians and Mayans to episodes of severe drought provides useful insights into what we are doing wrong

**Prehistoric America** Betty Jane Meggers, 2010 During the past 30 years the relationship between humans and the environment has changed more drastically than during any previous period in human history Local sustainable exploitation of natural resources has been overridden by global interests indifferent to the detrimental impact of their activities on local environments and their inhabitants Increasingly efficient technology has reduced the need for human labor but improved medical treatment favors reproduction and survival creating a growing imbalance between population density and food supply Rapid transportation is introducing alien species to distant terrestrial and aquatic environments where they displace critical elements in the local food chain This succinct and profusely illustrated volume applies evolutionary and cultural theory to the interpretation of prehistoric cultural development in the western hemisphere After reviewing cultural development in Mesoamerica and the central Andes Meggers examines

adaptation in North and South American regions with similar environments to evaluate the influence of adaptive constraints on cultural content What made the human species dominant on the planet is the substitution of cultural behavior for biological behavior Prehistoric Americans applied this ability to develop sustainable relationships with their environments Many succeeded and others did not Paleoclimatic reconstructions can be compared with archeological sequences and ethnographic descriptions to identify cultural behavior responsible for the difference Comparison of the responses of Amazonians and Mayans to episodes of severe drought provides useful insights into what we are doing wrong

**Advances in Archaeological Method and Theory** Michael B Schiffer, 2014-06-30 Advances in Archaeological Method and Theory Volume 11 is a collection of papers that discusses world systems theory modeling interregional interaction in prehistory and the archaeological analysis of ceramics Some papers review dating and weathering of inorganic materials strategies for paleo environmental reconstruction as well as deposits and depositional events One paper reviews the Old World state formation that occurred in West Asia during the fourth and third millennia B C Another paper examines the role of interactions among societies in the process of local social change and the need for archaeologists to develop a framework in which to analyze intersocietal interaction processes The presence of items such as ceramics is associated directly to factors of availability functions economic values or ethnic affiliation As an example one paper cites the use and misuse of English and American ceramics in archaeological analysis in identifying cultural patterns and human behavior Another paper notes that each biological or mechanical agent of transport and deposition has its own respective attributes on a deposit where the attributes of sedimentary particles on the deposit can be defined From such definitions the archaeologists can
